

Distributor: DME
Product Name:
 Ledermix® Paste

Description:

Thanks to triamcinolone acetonide (a very effective anti-inflammatory corticosteroid), Ledermix® rapidly alleviates the pain and ensures swift relief. The broad-spectrum anti-biotic demeclocycline, a further active ingredient, controls the usually associated bacterial contamination.

Thanks to its special combination of active ingredients, Ledermix® offers multiple benefits: Rapid analgesia and effective reduction of cariogenic organisms plus simple application make it highly effective in all particularly disagreeable situations for which few effective painrelieving modalities are available.

Product Name:
 One Visit Crown (OVC)

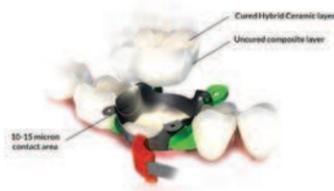

Description:

One Visit Crown completed in **30 minutes** with our new direct method. Now available in lithium disilicate for the ceramic lovers The One Visit Crown(OVC) combines a pre-formed occlusal layer and high quality composite layer containing 73% zirconia glass. The uncured layer of the OVC is pressed directly onto the tooth preparation. Mould to fit then simply spot cure, shape, final cure and finish. The OVC comes in five sizes for each posterior tooth type. No need for impressions, cord packing, dental labs or delays.

OVC LITHIUM

- Made from lithium disilicate
- Stronger & longer lasting
- Completed in a single appointment
- Perfect fit and good interproximal contacts
- Dentistry's favourite restorative material

Distributor: DME
Product Name:
 Initial™ LiSi Press

Description:

The unique pressable Lithium Disilicate Glass Ceramic GC Initial LiSi Press is the first lithium disilicate ceramic ingot with High Density Micro-nization (HDM), a technology unique to GC. It uses equally dispersed lithium disilicate micro-crystals to fill the entire glass matrix rather than using traditional larger size crystals that do not take full advantage of the matrix structure. Ensuring the product remains super stable, without distortion or drop in value, after multiple firings. The result is the ultimate combination of strength and aesthetics, making GC Initial LiSi Press perfectly suitable for all types of restoration through all levels of transparency, providing unsurpassed physical properties and the most natural, lifelike aesthetics – press for a beautiful smile.
