Oral Care

THE COMPLETE PROPHYLAXIS SYSTEM FOR YOUR PRACTICE
VOCO – THE DENTALISTS

Modern dentistry demands dental products with the highest quality material and user-friendliness. This calls for practice-oriented and efficient solutions. We at VOCO pursue exactly these goals. We see ourselves as “Dentalists”, i.e. specialists in dental materials. With this in mind, we focus on this one area of activity and concentrate all our efforts on providing a service to dentistry.

Since 1981, VOCO has been supplying dental practitioners all over the world with high-quality dental materials and today ranks among the internationally leading manufacturers in this sector. With our comprehensive range of over 100 quality products, we supply dental practices and laboratories in over 100 countries with pharmaceuticals and medical devices “Made in Germany” for preventive, restorative and prosthetic dentistry.

Thanks to a certified quality management system and intensive research and development work, VOCO has again and again been able to set new standards in the development of innovative dental materials. For this purpose, VOCO researchers are involved in an active exchange of ideas and information with over 150 universities and other renowned research establishments throughout the world. The expertise of VOCO’s scientific experts is rated very highly. For instance, VOCO has already played a leading part in several research projects sponsored by the German Federal Ministry of Education and Research (BMBF).

Product innovations have repeatedly made VOCO a pioneer in the world of dentistry. An example is Grandio®, the first nano-hybrid composite worldwide, which advanced to become one of the most successful universal restoratives internationally due to its excellent material and handling properties. With the Grandio®SO, VOCO presents a nano-hybrid composite for all classes of cavity which, thanks to its physical parameters, is considered one of the most tooth-like restorative materials.

The VOCO range comprises temporary and permanent restoratives and lining materials of different material classes, adhesives and luting materials, root posts and core build-up systems, impression materials, materials for the fabrication of temporary crowns and bridges, fissure sealants, preparations for fluoridation and desensitisation, as well as laboratory products and devices.

In this catalogue VOCO presents its current product range in the field of prophylaxis and hopes to provide you with useful inspiration and ideas for clinical practice.
As usual, the Oral Care catalogue provides you with comprehensive information on each individual product and offers you a quick and practical overview of the entire product range. You can now find the fundamental product characteristics at a glance: our new icons visualise the core properties, meaning you know immediately whether the product must be light-cured or how high the fluoride release is. Different icons help you to find the right product and enable initial classification and judgment within seconds, which allows you to quickly gain a general overview.

**Material composition**
- This product is based on nanohybrid technology.

**Application of the material**
- This material is automatically mixed in the correct ratio before application.

**Filler content**
- This product has a defined filler content, which is indicated in percent by weight.

**Fluoride content**
- This product contains the level of fluorides indicated. For detailed information, please consult the instructions for use.

**Curing of the material**
- This product cures through exposure to light. The time indicated represents the average time. For detailed information, please consult the instructions for use.

**Application of the material**
- This material is available in the non-running, non-dripping NDT®-syringe.

**Material composition**
- This product contains the ingredient shown.
Oral Care

A SYSTEM FOR THE WHOLE FAMILY

The main oral diseases are caries and periodontitis. It has been scientifically proven that the risk of both of these diseases can be reduced through regular professional prophylaxis measures, a healthy diet and good oral hygiene at home.

Measures which help to preserve teeth for a lifetime

- Regular check-ups by a dentist
- Professional tooth cleaning
- Regular fluoridation
- Sealing of fissures
- Good oral hygiene at home
- A healthy and balanced diet

With its new and complete prophylaxis system, VOCO offers solutions for patients of all ages. In addition to tried and tested prophylaxis products, we also offer preparations for remineralisation, desensitisation, products for oral hygiene at home as well as a tooth whitening system. To ensure optimal working procedures for you and to offer your patients pleasant and highly effective treatment, our products have been developed in conjunction with experienced scientists, practitioners and patients. VOCO supports you with a highly effective concept which not only satisfies your demands in terms of efficiency but also your patients’ expectations as regards comfort.

Your patients can choose between lifelong prophylaxis or lifelong treatment.
Oral Care

PROPHYLAXIS FOR CHILDREN AND TEENAGERS

Today caries prophylaxis is becoming increasingly important. The foundations for a long-lasting, healthy set of teeth are already laid down in childhood. The prevention of caries should begin when the first milk tooth appears. After all, lifelong healthy teeth and gums require regular and thorough care. Healthy deciduous teeth are the prerequisite for a permanent set of teeth which remain healthy.

Given the growing awareness of the need for oral health and, in particular, comprehensive prophylaxis work, more than half of all German children starting school have caries-free milk teeth. Around two thirds of 12-year-olds in Germany have naturally healthy permanent teeth. These are the results of a study by the Department of Paediatric Dentistry at the University of Marburg performed on behalf of the DAJ (German Working Group for Oral Health Care among Children and Adolescents).¹

To ensure that this trend continues, VOCO offers products which have been specially developed for prophylaxis and prophylaxis for children.

You can encounter many causes of your patients’ dentine hypersensitivities during your daily work. Bifluorid 10 is the ideal preparation to effectively alleviate these complaints. Bifluorid 10 is ideally suited for accelerated remineralisation and fluoridation of tooth substance. Bifluorid 10 also prevents secondary caries after restoration, especially after employment of the etching technique.

Bifluorid 10 features a varnish base made from natural materials and the unique combination of 5 % sodium fluoride (equal to 22,600 ppm fluoride) and 5 % calcium fluoride. The special combination of the two fluoride salts permits both an immediate high release of fluoride (through NaF) and long-term fluoridation (through CaF$_2$). The easily soluble sodium fluoride provides the quick release of fluoride ions, that are converted to calcium fluoride on the tooth surface to effectively support remineralisation. The less soluble calcium fluoride, which also makes up 5 % of Bifluorid 10, acts to ensure that the fluoride remains on the surface of the teeth for an extended period of time. This, in turn, guarantees long-term fluoridation and long-lasting prophylaxis. The coactions of the two fluorides through the formation of calcium fluoride depots facilitate long-term conversion of hydroxyl apatite into fluorapatite. Damaged enamel surfaces are thus effectively protected.

Bifluorid 10 adheres especially well to enamel and dentine and dries quickly, thanks to its coordinated composition. The treated tooth is immediately protected against harmful external influences. The dentinal tubules are effectively sealed through the precipitation of calcium fluoride. Sustained protection against chemical, thermal and mechanical stimuli is the result your patients will notice immediately.

The treated teeth are not discoloured by the thinly applied, transparent varnish. The aesthetics are not affected.

**Mode of action of the sodium and calcium fluoride contained in Bifluorid 10**

**Tubulus A:** Formation of calcium fluoride by the reaction of the sodium fluoride contained in Bifluorid 10 with calcium ions contained in the saliva and dentinal tubuli liquid

**Tubulus B:** Storage of the calcium fluoride contained in Bifluorid 10 in the tooth substance and tubuli
Indications
Treatment of hypersensitivity, including
– cervical area and crown margins
– sensitivity after professional cleaning and calculus removal
– tooth surfaces after preparation and / or grinding
– worn occlusal surfaces and teeth carrying clasps
– after injury of the enamel (e.g. fractures, chips)
– sealing cavity margins after restoration, especially after the etching technique has been employed
– as a dentine protection / lining under amalgam fillings

Advantages
• Immediately desensitising
• Formation of a protective coat against thermal and mechanical influences
• Transparent – no discolouration of teeth
• Special varnish base reinforces long-term effect and deep fluoridation
• Economical and simple – high yield, low cost, fast application
• Dries quickly
• Colophony-free

FLUORIDE-CONTAINING TOOTH CLEANING AND POLISHING PASTE IN THREE CLEANING GRADES

**Gentle yet effective**
- Traffic light coding: simple to use without confusion
- Can be individually adjusted to each situation
- Contains fluoride (700 ppm) and xylitol
- Green polishing paste: Suitable for the care of implants
- Polish even after the use of powder jet devices
In addition to thorough sound oral hygiene at home, the basis for the prophylaxis of caries, periodontitis and peri-implantitis, is regular professional tooth cleaning (PTC) tailored to individual requirements. This creates noticeably smooth surfaces which inhibit renewed attachment of plaque-forming bacteria and the formation of staining. These are perfect preconditions for long-lasting oral health. The CleanJoy system enables you to thoroughly yet gently remove hard as well as soft plaque and staining from dental hard tissue, fillings, implants and prosthetic restorations. The “fine” paste is barely abrasive and therefore also suitable for polishing after using a powder jet device.

**Indications**

- Removal of soft and hard surface plaque
- Removal of extrinsic discoulouration (e.g. staining from coffee, tea or tobacco)
- Polishing of tooth surfaces as part of professional tooth cleaning, prior to whitening or following the removal of orthodontic devices
- Cleaning and polishing of restorations as part of professional tooth cleaning
- Removal of residues of temporary luting material prior to definitive bonding (cementation)

**Advantages**

- Stable, homogenous consistency
- No splashing (2,000 - 3,000 r / min)
- Available in three abrasion grades, thus can be individually adjusted to each situation
  - red paste (coarse) \[RDA \text{ value}^* = 195\]
  - yellow paste (medium) \[RDA \text{ value}^* = 127\]
  - green paste (fine) \[RDA \text{ value}^* = 16\]
- Traffic light coding: simple to use without confusion
- Can be used with any conventional instrument (small brush, cup, etc.)
- Contains fluoride (700 ppm) and xylitol (inhibiting effect on the metabolism of bacteria)
- The green polishing paste has a very low grade of abrasion and is therefore also suitable for the care of implants
- Pleasant light mint flavour
- Noticeably smooth teeth

*RDA values measured in accordance with DIN EN ISO 11609

Remin® Pro

PROTECTIVE DENTAL CARE WITH FLUORIDE AND HYDROXY APATITE

Remin Pro combines three components for effective protection against demineralisation and erosion: hydroxy apatite, fluoride and xylitol. Remin Pro thus represents an optimal addition to the services offered by your surgery! And the patient can also continue this optimal care at home with the help of Remin Pro. It is very easy to apply, whether with a toothbrush following the oral hygiene routine in the evening, with a finger or using the individual tray.

With Remin Pro, the tooth is strengthened and the remineralisation as well as desensitisation of the tooth substance are promoted. The cream, which is available in the flavours melon, mint and strawberry, is mostly water-based. Remin Pro thus not only has a pleasant flavour, but it is also gentle on the mouth. Remin Pro – Recuperation for the teeth.

Indications
After whitening
After professional cleaning
Prevention and control of hypersensitivities
During orthodontic treatments

Advantages
• Restores the mineral balance
• Neutralises the acids from plaque
• Fluoride for strengthening the tooth enamel
• Regenerates the tooth after whitening
• Regenerates the tooth after professional cleaning or restoration therapy
• Contains 1.450 ppm fluoride

Presentation

Klint

FLUORIDE-FREE PASTE FOR PLAQUE REMOVAL AND POLISHING OF TEETH SURFACES

Klint removes plaque and impurities from the teeth thoroughly and carefully without causing damage to the enamel. Stained fillings will regain their original shade. Klint has a pleasant peppermint taste.

Indications
For manual or mechanical plaque removal
Tooth cleaning before caries prophylaxis, treatment of hypersensitive cervical areas and composite restorations

Advantages
• Cleaning particles made of special silicic acid
• Thorough cleaning without damage to enamel
• Pleasant peppermint flavour

Presentation
REF 2336 Tube 60 g
Hypersensitivity
Sensitive teeth are a problem for a large number of people. Usually, the condition causes only transient pain which patients do not always report to their dentists. Hypersensitivity is mainly caused by exposed dentinal tubules. Therefore, the aim of treatment is to seal these tubules for the long-term.

Components and effect of VOCO Profluorid® Varnish
VOCO Profluorid Varnish is a colophony-based varnish containing 5 % sodium fluoride (22,600 ppm fluoride). The fluoride ion, together with the calcium ions accumulated in the tubules, causes a precipitation of calcium fluoride, which effectively seals the tubules. According to a user survey, over 85 % of patients were completely free of pain after only one treatment with VOCO Profluorid Varnish. As well as rapidly sealing the dentinal tubules, VOCO Profluorid Varnish also causes calcium fluoride deposits to form on the tooth surface. These deposits protect the tooth from acid attacks, promote remineralisation and contribute to the long-term formation of fluoroapatite.
Xylitol, which has a proven cariostatic effect in addition to its taste-enhancing properties, is also added to the varnish.

Indications
Treatment of hypersensitive teeth
Sealing the dentinal tubules, e.g. for cavity preparations or on sensitive root surfaces

Advantages
- Easy to apply on wet surfaces
- Aesthetic, white-transparent tooth colour
- Fast desensitisation and fluoride release (5 % NaF ≙ 22,600 ppm fluoride)
- Available in four pleasant flavours: melon, mint, cherry and caramel

Advantages of the SingleDose
- Product and applicator in hygienic disposable packing
- No additional devices required
- No spilling in any position

Survey of testing dentists results

Simple and aesthetic desensitising with VOCO Profluorid® Varnish
Admira® Protect

Admira Protect is an innovative, light-curing Ormocer® based protective varnish. Ormocer® stands for “Organically Modified Ceramics”. One of the greatest advantages of Ormocer® based materials is their outstanding biocompatibility.

Most hypersensitivities, particularly in the cervical dentine region, can be permanently reduced with just one treatment using Admira Protect. The use of Admira Protect is recommended on exposed crown margins, after tooth cleaning and following the removal of tartar.

The colourless varnish seals the dentinal tubules both permanently and reliably. The transmission of pain as a result of movement of the dentinal fluid is thus significantly reduced. In contrast to fluoride varnishes, with Admira Protect, tooth necks are permanently sealed with light-curing material thanks to the formation of a protective layer.

Indications
Treatment of hypersensitive dentine
Treatment of cervical areas and crown margins
Treatment of cervical areas after professional cleaning and calculus removal

Advantages
- Biocompatible as Ormocer® based
- Permanent elimination of hypersensitivity
- Reliable adhesion
- Increased physical and chemical resistance
- High degree of abrasion resistance thanks to special filler technology
- Minimisation of cariogenic microorganisms
- Additional caries protection thanks to fluorides

Simple to use
Effective sealing is intended to protect the fissure from being colonised by cariogenic bacteria. However, the question still remains: What happens underneath a fissure sealant? The use of a high-quality, transparent fissure sealant, such as our newly-developed Control Seal, can provide the answer. The growth of an existing small site of incipient caries can be arrested by effective fissure sealing, i.e. by cutting off its supply of substrate. Further progression of the caries over time can be monitored through the sealant made using Control Seal, and the best moment for therapeutic intervention can be determined, in case the caries has progressed. This makes it possible, on the one hand, to work in a substance-conserving way, while on the other hand delaying invasive therapy for as long as possible or even avoiding it.

Control Seal combines the positive properties of transparent and opaque fissure sealants: Transparency and excellent physical properties in a single material. The transparency also enables the use of laser fluorescence-based diagnostic methods. Control Seal is a fluoride-containing, highly filled fissure sealant. Its filler content is 55 % w/w.

**Indications**

- Sealing / filling of pits and fissures
- Sealing / facing of damaged enamel surfaces
- Covering of predilection sites, e.g. within the scope of orthodontic treatments
- Sealing of composite or glass ionomer fillings (protective layer against moisture)
- Sealing of deciduous teeth
- Extended fissure sealing

**Advantages**

- Transparent
- Suitable for laser fluorescence-based diagnostic methods
- Excellent handling
- Highest filler content among the transparent fissure sealants (55 % w/w)
- Outstanding physical properties
  - high compressive strength
  - high flexural strength
  - low level of abrasion

**Presentation**

- REF 1303 Set syringe 3 × 2 g, Vococid gel syringe 3 × 2 ml, application cannulae type 45 / type 48
- REF 1304 Syringe 2 g, application cannulae type 45

Laser fluorescence-based caries diagnostics reveal that the discoloured fissure on tooth 27 represents a case of incipient caries. Immediately after sealing, and six months later, the values measured using the laser fluorescence camera are identical to those of the initial situation, confirming that the caries is stagnating, while Control Seal’s functionality is unaffected.
Fissurit® · Fissurit® F · Fissurit® FX

THE TRIED AND TESTED FISSURE SEALANT SYSTEM

Fissurit®
Fissurit is a transparent fissure sealing material which is supplied in bottles. The transparency of the material facilitates easier monitoring of the base of the fissure and the sealed fissure.

Fissurit® F
Fissurit F is a white-coloured material for sealing fissures, available both as a liquid in bottles and in the VOCO NDT® syringe. NDT® stands for Non-Dripping Technology. The NDT® syringe delivers highly flowable materials such as Fissurit F without running or dripping, thereby considerably simplifying treatment of the patient’s fissures. Syringes that run, loss of material and “overfilled fissures” are problems of the past thanks to the non-dripping Fissurit F syringe. In addition, Fissurit F contains fluoride to inhibit the development of caries. The material is coloured white to enable you to maintain a close visual check of marginal integrity.

Fissurit® FX
Fissurit FX is a highly filled fissure sealant which provides a long-lasting seal even where extensive fissure sealing has been carried out. At 55 % w/w, Fissurit FX is the most highly filled fissure sealant in its class after Grandio Seal. Fissurit FX, too, contains fluoride to inhibit the development of caries and is coloured white to enable you to maintain a close visual check of the edges of the fissures.

Application of Fissurit®

The success of Fissurit® is based on various factors
- Fissurit, Fissurit F and Fissurit FX are light-curing, single-component materials and therefore save you time and material
- The low viscosity of the Fissurit products ensures that the material flows deep into the fissure, filling and sealing it to ensure marginal integrity
- All Fissurit sealants are extremely abrasion-resistant thanks to the balanced polymer matrix
- Using the extra fine cannulae supplied with all Fissurit F and Fissurit FX systems, the fissure sealant can be applied quickly, simply and hygienically directly into the previously conditioned fissure
**Fissurit® · Fissurit® F · Fissurit® FX**

**THE RIGHT MATERIAL FOR EVERY FISSURE**

---

**Fissurit® FX**

- **Indications**
  - Sealing of fissures and occlusal surfaces for caries prophylaxis
  - Sealing of extended fissures
  - Filling of small cavities

- **Advantages**
  - Filler content of 55 % w/w for outstanding abrasion proofness
  - Quick and easy application from the direct-application syringe with bendable metal cannulae
  - Optimal flow properties
  - High stability and good adhesion to enamel
  - Continuous fluoride release
  - White for easy visual control

Grandio Seal is the very first nano fissure sealant to make no compromises whatsoever. It is an extremely flowable, light-curing fissure sealant material with a filler content in excess of 70 % w/w. This makes Grandio Seal the most abrasion-resistant fissure sealant. Its viscosity guarantees, amongst other things, that the material penetrates deep fissures without forming bubbles. This unique combination is made possible thanks to the use of nano-particles: outstanding flowability, minimal abrasion and, at the same time, physical values which are better than those for various hybrid composites for the posterior region.

**Indications / Scope of application**

Sealing / filling of fissures and pits in the following cases:

– Deciduous teeth and / or six-year molars after eruption that are free from caries, but vulnerable to caries
– Adult patients with a diagnosed high caries risk
– Patients with a high caries risk due to possibly limited oral hygiene
– Patients with limited treatment compliance

Sealing of damaged enamel surfaces

Covering of caries predilection sites during orthodontic treatments

**Non-invasive fissure sealing with Grandio® Seal**

**Advantages**

- Use of nano-fillers for optimal flow behaviour
- With 70 % w/w highest filler content in its class
- Outstanding physical properties
  – low abrasion
  – extremely low shrinkage values
  – high transverse strength
- Optimal wetting
- Excellent handling
- Perfect marginal adaption

Perfect Bleach®

GENTLE YET EFFECTIVE

Perfect Bleach is a carbamide peroxide-based whitening material. Depending on individual preferences, you can offer treatment with carbamide peroxide gel with a concentration of either 10 % or 16 % (corresponds to 3.5 % or 6 % H₂O₂). This gentle yet effective whitening material can be used both in the practice and, following instruction and initial treatment from a dentist, at home.

The sodium fluoride and potassium contained in the 16 % Perfect Bleach ensure that hypersensitivity is prevented during and after the treatment.

Use of the set is extremely easy for practice staff and patients alike. It contains all the materials required for the whitening process and for the prior fabrication of the tray.

Indications

Gentle and permanent tooth whitening for vital and non-vital teeth e.g. in cases of staining due to medication, fluorosis, food, trauma, ageing etc.

Advantages

• Two concentrations of 10 % and 16 %
• Simple user-friendly application
• All materials included in a complete set
  – two deep-drawing films and Block Out Gel LC for the fabrication of individual trays
  – 6 × 2.4 ml Bleaching gel
  – storage case for the tray
  – shade guide for verifying treatment success
  – patient-friendly pictogram and instructions for use
• Pleasant menthol flavour
• Concentration of the carbamide peroxide gel remains stable even if the cold chain is interrupted
