

Artificial intelligence (AI) has remarkably increased its presence and significance in a wide range of sectors, including dentistry. Dental professionals may employ AI systems as a supplemental tool to improve the precision of diagnosis, treatment planning and treatment result prediction. *AI dentistry—international magazine of artificial intelligence in dentistry* unfolds the trends and applications of AI in various dental specialties, including detection and treatment of periodontal disease, implantology, oral and maxillofacial surgery, endodontics, imaging, orthodontics.

Through insights articles, interviews and user reports, *AI dentistry* helps readers understand the full potential that arises from AI technology in order to render patient care more efficient, accurate and consistent. From both a practical and clinically applicable approach, *AI dentistry* explores and reports on image analysis, predictive analytics, virtual reality simulations for patient education, dental robotics and automated patient communication and practice management.

Each issue of *AI dentistry* has a print distribution of **10,000 copies**, with additional digital reach from e-paper subscriptions via the Dental Tribune website, e-newsletters and social media channels.

In addition, the magazine is distributed free of charge to attendees at major international congresses, exhibitions and specialty-specific events, with free e-papers being offered for online events.

Within the e-papers, adverts are linked to the client's supplied URL. Complementary PR and product texts as well as clinical articles or case studies may be submitted in support of advertising campaigns and are subject to review and approval by the managing editor.
