

3D printing — international magazine of dental printing technology

Additive manufacturing is a fast-emerging technology with a transformational impact on the dental industry. The *3D printing* magazine helps dental professionals, clinics, technicians and laboratory owners gain the requisite knowledge about efficient 3D-printing workflows and manufacturing processes in clinical practice, which allow for faster turnaround times, greater customization as well as increased accuracy of treatments and outcomes.

3D printing presents the latest developments in the field, market reviews, industry news, market comparisons, user and case reports, and expert opinions. Reader-friendly articles discuss practical aspects of modern dentistry to help dental professionals achieve their clinical goals with 3D-printing technology.

3D printing has a print distribution of 10,000 copies per issue, with additional digital reach from replicated e-paper versions published on both the Dental Tribune and the dedicated 3D printing specialty websites, within e-newsletters and on social media channels.

In addition, the magazine is distributed free of charge to attendees at major international congresses, exhibitions, and specialty-specific events, with free e-papers being offered for online events.

Within the e-papers, advertisements are linked to the client's supplied URL. Complementary PR and product texts as well as clinical articles or case studies may be submitted in support of advertising campaigns and are subject to review and approval by the managing editor.
