Minimally invasive root canal treatment uses **fluids, acoustics**

The GentleWave® System offers a minimally invasive¹ alternative to standard root canal treatment, employing patented Multisonic Ultracleaning® technology to deliver fluids throughout the entire root canal system.

The advanced combination of fluid dynamics and broad-spectrum acoustic technology² enables the GentleWave Procedure to reach into the deepest, most complex portions of the root canal system¹ to remove tissue, debris and bacteria.²

The result is a more thorough, more effective cleaning that potentially helps reduce the need for retreatments over time.³

The GentleWave procedure also helps preserve the integrity and functionality of the tooth by leaving more of the dentin structure intact³ and can typically be completed in just one session.³
