CLEARFIL SA CEMENT: Top Self-adhesive Resin Cement of 2010

Kuraray, established in Kurashiki in Japan in 1926, was originally involved in the industrial production of synthetic fibres from viscose. Through intensive research and development work, the company has created a broad base of experience and technology in the sectors of polymer chemistry, chemical synthesis and chemical engineering.

As science and society continue to develop, new questions and challenges arise for dental materials. With the innovative self-adhesive resin cement CLEARFIL SA CEMENT, which was first presented in Europe at IDS 2009, Kuraray Europe introduced a new dual-curing, self-etching resin cement that meets the demands of today’s dental practice.

CLEARFIL SA CEMENT was recently voted the Top Self-adhesive Resin Cement of 2010 by The Dental Advisor. Excess paste can now be removed in one piece or in larger bits with little effort. Kuraray’s unique adhesive monomer (MDP) ensures a consistent, strong bond strength and low technical sensitivity. The high mechanical stability ensures an excellent marginal seal, while the auto-mix syringe and the optional dispensing gun (CLEARFIL DISPENSER) provide a direct and comfortable way of using the material without the necessity of mixing. A precise application, even directly into the root canal, is possible with the use of the Endo Tip.

According to the company, CLEARFIL SA CEMENT can be used for the adhesive attachment of full-ceramic, composite, metal or zirconia crowns, bridges, inlays and onlays.
