**ALPRO drives safe and clean infection control**

Daniel Zimmermann  
DTI

LEIPZIG, Germany: Germany-based ALPRO is offering a range of new and proven products for treatment-water disinfection and the removal of biofilm from dental equipment to dentists in Asia. With IBS Forte, for example, and the independent water supply system BCS combined with Alprophos and Alprophos, it is possible to provide quality drinking water for dental units. Hydrophilic standards are met with a selection of mild washing liquids and hand preparations, such as the AlproSept-HDE gel and Cremana derm-protect, which is suitable for the daily care and protection of the hands.

With very high material compatibility and proven quick disinfection times MinutenSpray-classic and PlastiSept (also available as a high-quality wipe), ALPRO is able to provide quick efficiency and excellent cleaning results. PlastiSept is alcohol free and intended for sensitive surfaces. BIB forte is a solution for general instrument and drill disinfection. It is economical and intended to appeal to environmentally aware and price-conscious practitioners.

ALPRO is a top global specialist in the cleaning, maintenance and disinfection of instruments of any kind (including transmission instruments), contaminated surfaces in practice and dental aspiration systems and with and without dental amalgam separators. Their AlproJet product line was the first two-phase system for the cleaning of dental aspiration systems. This was also the first product that ALPRO marketed 20 years ago. As a global player, the company works with over 120 partners around the world in 65 countries. Amongst others, local production sites have been set up in Australia, India and Vietnam.

**What can participants expect from IDEM Singapore in 2010?**

IDEM Singapore 2010 will again provide an excellent opportunity for manufacturers from around the world to meet and conduct trade in a central location in the Asian region. Since the meeting’s inception, we have continued to evolve IDEM to suit the needs of the dental industry in the region. IDEM Singapore will benefit from the extensive knowledge and experience we have garnered from the previous five IDEM events and our global expertise and resources as an organiser and manager of conferences and exhibitions.

**Dr Lee, what issues did SDA consider in devising the conference theme for IDEM Singapore 2010?**

Dr Lewis Lee: The rapid growth in popularity of and new developments in dental implants and related products, materials and techniques has dominated the dental landscape around the world for some time. In planning the scientific conference for IDEM Singapore 2010, we sought to address the increasing needs of the dental community for comprehensive information on the latest developments in these areas.

**What will conference delegates gain from this scientific conference?**

We have organised a multifaceted programme led by international presenters that will give delegates access to the latest research and developments in the fields of dental aesthetics and implantology, as well as practical advice on treatment planning, operative techniques and post-operative care. We believe delegates will leave the conference with knowledge that can be incorporated into daily clinical practice and a greater understanding of key principles and philosophies at the leading edge of dentistry today.

**Thank you very much for the interview.**
