New dental alert system aims at improving patient safety in Europe

By DTI

STRASBOURG, France: Requiring dental regulators in countries within the European Economic Area (EEA) to inform each other once a dental professional has been prohibited or restricted from practising, the newly implemented European Alert Mechanism aims at improving transparency in European dentistry.

Carter, OBE, Chief Executive of the British Dental Health Foundation, on the new legislation: “This will hopefully lead to an improvement in standards of dental practice Europe wide and more public trust in dentistry.”

In this context, Carter pointed to the increasing trend of dental tourism and the potential pitfalls associated with it.

Although some countries still do not have any formal system of registration for dentists, Carter expressed his belief that “mechanisms such as this make for a much more transparent profession and greater patient protection.”

The new EU legislation, which came into effect on 18 January, provides that a Europe-wide alert be issued within three days of a decision to prohibit, suspend or restrict a professional’s practice—even on a temporary basis—in another EEA state.

As a minimum, national regulatory bodies, such as the General Dental Council in the UK or the National Board of Health and Welfare in Sweden, will need to include the respective professional’s name, as well as his or her date and place of birth, in order to allow other regulators to identify that individual.

Furthermore, the alert must indicate the period for which the restriction applies, including the date on which this decision was made.

Although the alert must not contain any background information or justification of the restriction, concerned regulators may request further information.

“We are delighted that this system has come into effect, it gives patients much greater visibility and security when it comes to their oral health,” commented Dr Nigel Carter, OBE, Chief Executive of the British Dental Health Foundation, on the new legislation. "This will hopefully lead to an improvement in standards of dental practice Europe wide and more public trust in dentistry.”
