This ADIA Symposium is aimed at providing information essential to auxiliaries working with dental implant patients. The program will evaluate the interaction of implant patients and team members and review methods the team can apply to help guide patients through implant therapy and its various components. The program will address all aspects of implantology including: case presentation, answers to commonly asked questions, treatment planning, surgical, prosthetic and maintenance procedures.

Upon completion of this program participants will be able to:
- Develop an appreciation for the role of dental implants in the maintenance of oral health; identify patients who would benefit from implant therapy; discuss the consequences of non-therapy to patients; develop a knowledge base related to treatment planning and implant cases; describe important techniques for effective case presentation; review the techniques and skills involved in implant maintenance; develop techniques for good intra/inter office communication and documentation; understand the laboratory procedures involved in implant therapy; understand the radiological importance during treatment planning.

Maintenance and Evaluation Procedures
- Professional care, armamenta, and techniques
- Client education and care
- Management of implant complications and failures
- Evaluation and post-treatment care.

Breaks
10:15–10:45 and 15:00–15:30

Lunch
12:30–13:30

Friday, 27 August 2010
(Simultaneous Translation Into German)
Vivi Bohbot, Teresa Duncan & Lynn Mortilla
8:00–18:00

Introduction & Definitions
- Rationale for dental implants
- Historical overview
- Centrification
- Criteria for success

Patient Interaction & Education
- Case presentation & handling objections
- Commonly asked questions and appropriate responses
- Coordination & Communication

Assessment, Diagnosis and Treatment Planning
- Client evaluation and assessment
- Diagnostic and adjunctive procedures
- Treatment planning, site selection, and implant selection
- Risk management
- Implant complications and failures

Implant Surgical Procedures
- Surgical template & stent
- Pharmacology & Sedation
- Surgical preparation and infection control
- Surgical procedures
- Ancillary Procedures: Sinus lift, bone grafts, tissue regeneration, PRP

Prosthodontic Procedures
- Provisional prostheses & fabrication of temproaries
- Impressions
- Type of superstructures
- Laboratory considerations
