
Dr. Monteiro is coming to Middle East to lecture on direct restorations of anterior and posterior teeth, with special focus on new bulk fill resins and he shared with us his opinion on modern dentistry evolution and latest technologies used in dental materials.

Following the IDS Cologne we see a big change in the dental industry, towards which direction do you see dentistry heading?

Dr. Monteiro: Modern Dentistry walks towards the maximum conservation of dental tissues (enamel and dentin). Accordingly, materials which are able to emulate the natural tooth tissues in aesthetics and function have been developed.

We have witnessed in recent years a technological revolution in dentistry. With more and more applications, technology in dentistry open us new doors, new ways to go. With no doubt the technology is not only the present but is the future of dentistry.

Being an international speaker, what is the most important message you would like to portray to the audience?

Dr. Monteiro: Dentistry is constantly developing and is need of an update regularly.

In this sense, we should not be stuck in the past, trying to follow new trends if not properly supported by scientific evidence. Don’t be afraid of new technologies, new products, new dental restorative techniques. All this will help us to simplify our daily clinical world.

I am excited about the opportunity to visit and lecture in Saudi Arabia. I was interested to visit and lecture in Saudi Arabia.

What is your impression of Dentistry in the Middle East?

Dr. Monteiro: I have not had direct contact with dentistry in Middle East, as this will be my first time I will travel to these countries. However, I have followed the work of some colleagues in this region, which has a very high level of excellence. So I have a very positive opinion.

What is your opinion regarding bulk fill posterior restorative materials? What are the major advantages and disadvantages?

Dr. Monteiro: I really like the bulk fill resins. As a main advantage - the possibility of using large thickness of material, lower shrinkage and easy application. The disadvantage is that can be used with a lower occlusal wear. This is not the case with the latest versions, for example with Filtek™ Bulk Fill Posterior, as those are materials that can be used with a lower occlusal wear.

I would choose a resin composite and apply it correctly. There are bulk fill resins that are very fluid. Usually all these more fluid resins need to be coated with a conventional composite resin, due to suffering more shrinkage and to avoid occlusal wear. This is not the case with the latest versions, like Filtek™ Bulk Fill Posterior, as those are materials that can be used with a lower occlusal wear.

In these lectures we will discuss the new materials and techniques for direct restorations of anterior and posterior teeth, with special focus on new bulk fill resins. We will also discuss simple techniques to make direct restorations with a high aesthetic level.

You will love how simple it is to make an aesthetic restoration.

"With more and more applications, technology in dentistry open us new doors, new ways to go."

This is not the case with the latest versions, like Filtek™ Bulk Fill Posterior, as those are materials that can be used with a lower occlusal wear.

In these lectures we will discuss the new materials and techniques for direct restorations of anterior and posterior teeth.

In which case would you prefer to use bulk fill composite in the posterior area?

Dr. Monteiro: To be honest, in direct restorations I currently use almost always the bulk fill resins in posterior teeth.

What is the risk of post-operative sensitivity with bulk fill posterior composites vs traditional composites using traditional layering technique?

Dr. Monteiro: With bulk fill the risk is much lower, due to lower polymerization shrinkage.

What are the key success factors when working with bulk fill posterior composites?

Dr. Monteiro: Choosing the right composite resin and apply it correctly.

Whitepeaks Dental Solutions:
- dental CAD/CAM materials "made in Germany" proudly manufactured in Wesel / Germany
- exclusively made from raw materials of Tosoh / Japan, world market leader for zirconium oxides
- research and development of innovative products, the base of your success
- support through qualified technicians
- we are certified according to DIN EN ISO 13485, CE0483 and USA-FDA Registration Number: 3009409473

CopaSintec K
perfection in Argon-Sintering-Alloys

CopaSintec K - the new freedom
soft Co/Cr milling - wet or dry
up to 14 unit bridges

Dr. Paulo Monteiro

Paulo Monteiro, DMD, MSc
Dr. Paulo Monteiro obtained his degree as a Doctor of Dental Medicine at the Instituto Superior de Ciências da Saúde-Espirituista (ISCSE) in Caparica, Portugal. He completed post-graduate training in Aesthetic and Restorative Dentistry at ISCSE.

Currently, he works there as an assistant Professor responsible for the post-graduate program in Aesthetic and Restorative Dentistry and is occupied in a dental practice. In addition Dr. Monteiro is a PhD student in Dentistry at the University of Santiago de Compostela, Spain. He is involved in research of new dental materials, including composite resins, dental adhesives, dental ceramics and new digital technologies.
