Now In The UAE

Since 1995 Middle East Dental Laboratory has been a vanguard of the latest advancements in the field of dental technology in the UAE; and gained a reputation for expertise in the fields of orthodontics, implants, and cosmetic dentistry.

Now with the support of a state-of-the-art full service laboratory, dental suites and skilled technicians our expanded facility is able to offer Inman Aligners—a innovation in front teeth alignment. The Inman Aligner is a simple removable appliance used to align front teeth quickly and safely. It’s ideal as a stand alone treatment or to pre-align teeth prior to further cosmetic options such as bonding or minimal veneers.

How does it work?

The Inman Aligner has Nickel Titanium coil springs that power two aligner bows that gently oppose each other, guiding the teeth into their new position. These gentle forces are active over a very large range of movement, which is why the Inman Aligner works so quickly. The image (Fig. 1) shows the squeeze effect of the two aligner bows on the front teeth. The inner bow pushes forwards, while the outer bow pulls back on the front teeth.

As the leading dental laboratory in the Middle East, we work within international guidelines to deliver this latest advancement in the field of dental technology. Our experienced staff offer a hospitable service for optimal results.

The first course in Dubai to become an accredited Inman Aligner doctor is being held on November 10th and 11th 2013. Check the website for more course information and other upcoming training dates & events.
