Family-owned Flow Dental adds to its digital imaging product line

By Flow Dental Staff

Conversion from film to digital takes many forms. It’s not just the dental office that is moving from film to digital imaging. Flow Dental, long a leading manufacturer of dental film and film accessories, has also transformed its product portfolio to include unique products essential to every dental practice that has gone digital. We determined that our relevancy in a digital world would hinge on our ability to provide dentists with accessories that improve sensor or PSP [phosphor storage plate] usage and suggest procedure work-flow... no pun intended,” said Bill Winters, president of Flow Dental. “Dentists have really responded to our digital products. They recognize the added value we put into each product. They don’t buy our products based on price, they buy based on the benefits to their practice.”

Take the PSP market. Today, one out of every eight phosphate plate users relies on Flow’s Safe’n’Sure line of PSP envelope. Safe’n’Sure’s three product styles each offer efficient time-saving solutions to enhance throughput and productivity, while helping to extend the life and usage of the phosphate plates.

A great example of this is Flow’s Safe’n’Sure OPT style (Fig. 1). These PSP covers are designed for plates that include magnets, which account for about 25 percent of the market. Unlike any other product, Flow pre-loads the cardboard insert halfway into the PSP envelope. Not only does this reduce a time-consuming step, it also assures that the plate can never be loaded incorrectly (because the magnet on the plate must line up with the same bite block). The bite block can be adjusted to the midline of any sensor, whether horizontally or vertically placed.

Flow Dental recently celebrated 40 years in business. Its sister company, Wolf X-Ray, is celebrating more than 80 years of service to the medical imaging market. “As a family-owned business — much like the majority of dental offices we service — we are proud to be a valued provider of unique and elegant products, and the best is yet to come,” Winters said.

Flow Dental is far from finished re-inventing itself. Its newest sensor accessory the Exposure line of articulating strips (Fig. 3) “As a leader in diagnostic products, we felt the need for forceps. They come with their own handles. ‘They’re easy to use and long enough to reach the back molars’ Winters said. ‘Dentists will appreciate the added convenience of not having to search for forceps or get the ink all over their gloves.’ Flow recently celebrated 40 years in business. Its sister company, Wolf X-Ray, currently supplies two types of articulating strips, made in the United States (and no forceps needed).

The Komet F360 root-canal file system permits preparation of most root canals with a simplified, time-saving sequence requiring only two files. Highly flexible to minimize canal transportation, the files’ unique S-curve design and thin instrument core provide cutting efficiency while respecting natural root-canal morphology. Only two files in sizes 025 and 035 are required for most root-canal preparations. Their 0.04 taper promotes optimal debridement of the canal, maintains file flexibility and thus reduces preparation errors and permits ideal shaping of the root canal for subsequent obturation with any method.

The F360 files are employed in a torque-limited motor and used in a picking motion up to a predetermined working length. The same torque (1.8 Ncm) and speed values (250-350 rpm) are used for all files, dentists need not adjust speed or torque upon changing files during the preparation sequence. In addition to sizes 025 and 035, the F360 files are offered in sizes 045 and 055 to meet additional clinical situations, such as wide roots, and all F360 files are available in three lengths (L1, L2 and L3) to address varying coronal requirements.

The presterilized, single-use files prevent cross-contamination, eliminate the need to clean, disinfect and sterilize the instruments — and reduce the risk of fracture due to cyclic fatigue. Available in a sterile blister pack of six files of a single size and length, the files are supplied with a user’s manual and step-by-step instructions.

The Komet F360 root-canal preparation system also is available in a special Endo Introductory Kit, which includes 12 F360 files in size 025, 12 F360 files in size 035, the Komet AK10 file for pre-enlargement of the canal, a pack of paper points and a pack of gutta-percha points.

About Komet USA

Celebrating its 95th year in the dental industry, Komet is a recognized worldwide leader in the production of highly specialized, precision dental rotary instruments. Komet operates in the United States under the name Komet USA and sells directly to dental practitioners and dental laboratories. The company’s U.S. headquarters is in Rock Hill, S.C. For more information about Komet USA or the F360 endodontic file system, call (888) 566-3887 or visit www.komet-usa.com.
