TRI-SOK Now available in a cost effective 7gr Tube!

Tri-Sok is used for the treatment, after development, of inflammation in an extraction socket. Tri-Sok also prevents infection in the extraction socket where there is a history of dry socket and where the extraction has been traumatic. It contains Chlorotetracycline, a broad-spectrum antibiotic that acts against infective organisms.

Aspirin exerts analgesic and anti-inflammatory actions. The topical application reduces swelling and post-operative pain.

As well as the dental and maxillo-facial subjects covered, there will be lectures and demonstrations on the following topics:

• Dental positioning
• Healing of soft and hard tissue
• Suture techniques
• Occlusion and function
• Orthodontics
• Pain management

S4S Dental Ltd are pleased to announce a new course for 2009. Called “Applied Occlusion and Progressive Splint Therapy for Predictable Dentistry”, the six hour seminar will be presented by Dr. Helen Harrison a GDP with extensive experience working with occlusal splints. To date over five hundred patients have been treated with occlusal splints in Dr. Harrison’s practice digitising and delivering both complex and routine dental care.

The in-depth seminar will cover temporomandibular joint function and anatomy, diagnosis and treatment planning, principles of progressive splint therapy – relief of pain and stabilisation and recommended next steps – options for definitive solution.
Dentistry: The Adjunctive Treatment for Chronic Adult Periodontitis

Dentomycin is clinically proven to reduce pocket depths by as much as 42% over 12 weeks when used in conjunction with scaling and root planing.1

This adjunctive treatment for moderate to severe Chronic Adult Periodontal Disease does not interact with alcohol and is easily tolerated. Its pre-filled applicator enables direct application to the pocket base and makes it much easier to treat plaque and calculus in deep, irregular pockets and molar furcations. Key peri-odontal pathogens are significantly reduced following the application of Dentomycin in every 14 days for 5 or 4 applications.2

For more information please call John Jesshop of Blackwell Supplies on 020 7224 1457 or fax 020 7224 1691.

Alkapharm ‘learning lunch’

Reviewing your practise infection control policy?

The Alkapharm ‘learning lunch’ focuses on professionally recognised procedures for the successful, day to day prevention of cross contamination within the dental surgery environment.

Learning Lunch is designed as a refresher for the whole team and covers the day to day aspects of cross-infection control in the dental surgery. Session times can be scheduled for either during the practice lunch period or at the end of the clinical day.

Learning Lunch helps meet the requirements of the GDC re-certification scheme by updating knowledge and skills for the better practice practitioners. It is open to the whole clinical team for which attendees can claim verifiable CPD.

To arrange a ‘learning lunch’ for your practise or for further information telephone Alkapharm on 01785 714919.
