Every dental surgery should be equipped to enable the dentist or trained DSA to administer resuscitation. The Tricodent Emergency Resuscitation Kit is easy to identify and put into immediate use. Patents in the surgery or waiting room who suffer cardiac arrest, cerebrovascular collapse, respiratory arrest or an acute allergy condition may be given oxygen or an oxygen-enriched air supply to revive them using the self-reinflating bag.

The kit is supplied complete and ready to use with a fully charged 340 litre oxygen cylinder with multi-flow regulator, resuscitator bag and guedel airways. All components can be purchased separately & the K02 cylinder can be rented.

Tricodent also provides a full servicing and re-filling package to ensure that your practice always has an appropriate level of emergency cover.
