In the future of dentistry...

The UCL Eastman Dental Institute is renowned for translating its basic science contributions made to the evening by Dr. Gareth Brock, President of the British Dental Association. Lisa Durning’s research, entitled ‘Analysis of a novel embryonic stem cell line’, has been presented at the American Dental Association’s Annual Conference. She also became a member of SCAD, an international association of student clinicians.

Both the BDA and DENTSPLY would like to extend their gratitude to the speakers who contributed to the evening. The BDA will be sending out a copy of the proceedings. The BDA thanks all those who contributed, and looks forward to another informative event next year.

For more information, or to book an appointment with your local DENTSPLY Product Specialist, call 0800 072 3313 or visit www.dentsply.co.uk

Ocular surgery waiting lists can be reduced within weeks

Topdentals UK – a social enterprise created to help address the growing list of patients waiting for cataract surgery in NHS dentistry – has announced today that it is able to assist Primary Care Trusts by undertaking short-term contracts or pilots to reduce minor ocular surgery waiting times.

The organisation can arrange for a state-of-the-art mobile dental operating theatre to be up and running in a suitable location within 6 weeks to allow PCTs to identify patients and then bring them into the service, in the same way that hospitals use mobile units to provide a temporary or interim service while a longer-term solution is being commissioned.

The service can be set up with minimal impact to the PCET as all DENTSPHY and Vanquisha’s laboratories report direct to the service manager, so that access to equipment and space can be managed centrally. The organisation is also able to offer assistance on Publicity and communication about the service to the local community can also be provided.

For more information about Dentalspain’s mobile dental surgeries and theatres and the range of services available please visit www.dental-europe.co.uk or contact enquiries@dentalspain-europe.co.uk.

**Bending regardless of the light conditions**

The light- and dual-curing adhesive system from Ivoclar Vivadent

ExciTE F and ExciTE F DSC are fluoride-releasing total etch adhesives from Ivoclar Vivadent. The choice of the correct adhesive system to use depends on whether or not the curing light will be able to cure the adhesive.

The light-curing adhesive ExciTE F is used in clinical cases where the exposure or not the curing light will be able to cure the adhesive. In addition to being supplied in bottles and single-dose vials, ExciTE F is now available in the new VivaPen delivery form. The amount of adhesive contained in a VivaPen is sufficient for approximately 120 applications. The integrated flow-controlled tips ensure the reliable control of the amount of ExciTE F that remains in the VivaPen.

**Impeded accessibility of the cavity**

If the cavity is not accessible with the curing light or if chemically/computerically cures are used, the dual-curing ExciTE F DSC (Dual Cure Single Component) material is indicated. ExciTE F DSC is available in single-dose vials in two sizes: Regular for normal preparations and Small for micro-cavities and endodontic applications. There is a VivaPen to speak to your local Ivoclar Vivadent Product Specialist for more information.

Contact: Ivoclar Vivadent Ltd, Ground Floor, Compass Building, Feldspar Close, Enfield EN1 5RE. TEL: 0118 294 7880

The testing institute describes Bluivate as follows: on

This is a great light! It's great to have one light that cures everything!

The curing design and power are great! An award we are proud of

The award by "The Dental Advisor" can be specifically used as a unique selling proposition for the Ivoclar Vivadent intervention.
