**Clinical photography course**

The learning resources provider, Smile-on, is now offering dental practices training in how to take high-quality clinical photographs.

Its Clinical Photography Course by Chris Orr, is available on-line or as a CD-ROM, so it can be easily incorporated into and around the working day. The course introduces the role of clinical photography in effective risk management and explores straightforward solutions to treatment monitoring and how to benefit from robust medicolegal protection.

It provides two hours of Continuing Professional Development and shows dental professionals how to keep patients fully informed using high-quality images, and how to support comprehensive clinical audits.

The course explores how to get great image results, focusing on eight key clinical areas, and participants receive non-obligatory advice on digital cameras and the latest in digital imaging.

A spokeswoman for Smile-on said: ‘With excellent clinical photography skills, participants will be able to accurately record treatment progress and development, create ‘baseline’ records of pre-existing conditions, enjoy a higher standard of referral correspondence and use the images to support professional development.’

For more information call 020 7400 9899 or email info@smile-on.com.

**GDC issues botox warning**

The General Dental Council is urging dental professionals to think very carefully before carrying out non-surgical cosmetic procedures such as Botox.

Its new guidelines are the result of a public consultation on the scope of practice of the dental team in 2008.

The conference will be held on Friday 15th and Saturday 16th May at the Royal College of Physicians, Regent’s Park, London.

For more information, and to book your place, call 020 7400 8989, email info@smile-on.com or go to www.smile-on.com.

**New dean for FGDP**

Mr Ladwa wants to continue the Faculty’s work to improve standards of patient care through education and training of the whole dental team.

He said: ‘I am honoured to be called upon to serve this Faculty which has done so much to raise the profile of general practice and to serve the profession that has been so kind to me.’

Mr Ladwa has been involved with the Faculty of General Dental Practice (FGDP(UK)) since its early days and became a board member in 1994. In the intervening years, he has taken on the roles of examiner and assessor of several of the FGDP(UK)’s postgraduate diplomas, and acted as deputy director of the Leadership and Management Certificate programme.

Mr Ladwa has twice been vice dean and has chaired the FGDP(UK)’s examinations and education committees and its international working party.

Richard Hayward said: ‘Russ brings a wealth of experience and a depth of knowledge to this role. He is dedicated to the FGDP(UK)’s mission and I wish him well for the next three years.’

Mr Ladwa will be supported by vice deans Vernon Holt and Charles Ormond.

**Professor calls for more prevention**

Russ Ladwa is the new dean

Russ Ladwa has been elected dean of the Faculty of General Dental Practice.

Mr Ladwa, a general dental practitioner based in London, will take over from Richard Hayward in June.

He added that clinician engagement is also problematic and it is something that needs addressing.

The inquiry was set up after the publication of a critical report by the House of Commons’ Health Committee last year.

However, the government, which is also carrying out its own review, claims preventative health care has ‘increased substantially.’

Chief Dental Officer Barry Cockcroft said: ‘Prescription of high concentration fluoride toothpaste rose by 153 per cent in 2006-7 and sales of topical fluoride varnishes have increased dramatically.’

The review was set up last month as an independent commission into NHS dentistry and is expected to produce a final report in September this year.

It is expected to concentrate on four major areas of work including innovative and flexible commissioning, integrated delivery of primary care services, developing oral health in SHAs and PCT strategies and incorporating patient experience into access into commissioning.
