Going back to basics

Dental Tribune speaks to Lisa Roche, marketing director UK & Ireland for Nobel Biocare, about her return to Nobel to head up the Back to Basics campaign and the innovations in the implant industry.

Dental Tribune: So, how did you get involved in the dental industry?
Lisa Roche: I started in dentistry straight after school. I decided to rebel against my mother, not go to university and thought I’d be able to relax for a year. However, she literally took me by the hand and said ‘I know a great job for you’. She then took me to the local dentist and practically sat the interview for me! So I started as a dental nurse and have been in dentistry ever since. I have been lucky enough to work for some very good people, which have given me my opportunities to progress. For example, when I worked for Andrew Da-wood in Wimpole St, the Nobel Territory Manager for London was leaving and said to me ‘I think you’d be really good at this’. So I left Andrew’s practice and thought I’d be able to relax. I decided to rebel against my mother, but I love it. It’s a huge challenge ahead and a case at seeing how to use the air at Nobel, and a focus on a new direction. I think it is very refreshing when a company can stand up and say ‘we need to do things differently, we’ve let many of the relationships we had go’ and being asked to return and to help restructure was something I couldn’t resist.
It is now so different. David Thoni (Regional Director, UK, Ireland and South Africa) is very dynamic and is very much one of the reasons I came back. There is a whole new buzz about the company now – David is really making inroads in getting the best from both the new staff he is putting place and the staff already established at Nobel. It’s a huge challenge ahead of me but I love it.

Dental Tribune: What do you have planned?
Lisa Roche: We do have some events coming up which encapsulate the biggest thing I am doing this year. Chairing the event is Prof Ian Brook from Sheffield University and co-chairing is Prof Howard PreisKel from Guy’s. It isn’t just about Nobel either – we are inviting speakers in from other implant system companies too.

Dental Tribune: What is Nobel focussing on at the moment?
Lisa Roche: For me, implants are very refreshing. Everybody now agrees that the All-on-4 concept, which is bringing a cheaper option to patients. So, where previously dentists might have put in eight implants, now the concept is four. There is a lot of clinical and academia behind it, a lot of clinical research behind it and we know it works. Eight implants is obviously more expensive than four – looking at the edentulous population, those people who don’t have dentists already or those who basically carry a bag of dentures around from practice to practice trying to get dentures that fit – instead of saying to these people we can give you eight implants and a fixed bridge, why not try angulating the two distal implants of four and cover a much wider load.

Dental Tribune: What is the biggest development in implant technology so far in your opinion?
Lisa Roche: Easily it is the CAD-CAM (Computer-Aided Design and Computer-Aided Manufacturing) innovations. You can design an implant and it also brings in a real team effort to the process. It’s not just the dentists; it is also the dental technicians and technicians working together with CAD-CAM for the benefit of patients.

Dental Tribune: What about the future?
Lisa Roche: For me the main focus for the future is acceptance – not by patients but by practitioners. I think that patients have accepted this for a long time. This isn’t quite the same for dentists – for many I think that more education about the potential benefits to patients is needed.

Everybody now agrees that implants work – it’s still getting the right people not necessarily putting the implants in themselves but referring to the right people. Nobel has stopped concentrating on short courses and are concentrating on long-term learning activities and our mentoring program.

For me, implants are very much like basic carpentry except with real people and soft tissue. It is in essence a screw, it just doesn’t go through a piece of wood. But you wouldn’t ask a carpenter to come to your house and put in a staircase after just a two-day course; however we were expecting dentists to go out after a two-day course and put implants into real live people.

I think the industry is now looking at different ways to help patients rather than trying to market implants as something that works. We know they work, so now it is a case of seeing how to use them best.

Professional Implantology Training and Mentoring
Taught by a dedicated, highly respected, multidisciplinary team of professionals, the course provides implant training that meets and exceeds the new GDC training guidelines for Implantology.

Training is carried out on 12 study days over 12 months and is ideally suited for General Dental Practitioners wishing to develop their knowledge and application of implant dentistry.

- little or no experience in implant dentistry needed
- hands-on training and live surgery
- mentored clinical treatment as per GDC recommendations
- the only course designed exclusively to prepare for the new diploma in implant dentistry from RCS Edinburgh, taught by one of the first in the UK to receive this diploma
- complimentary iPod touch with more than 25 hours of clinical video and lectures embedded (worth £2000.00 RRP)

The Implant Course £5995+vat
London April 2010 - 2011
Manchester course commencing June 2010

Course fees payable by instalments. A 5% discount will be provided if full payment is made one instalment. A deposit of £500 + VAT will secure your place on the course. Cheques should be made payable to The Centre for Advanced Dental Education Ltd
