Acupuncture can help dental phobics

People suffering from phobia could be helped by acupuncture, according to new research.

The study found that five minutes of acupuncture treatment in the top of the head cut anxiety levels by more than half.

Twenty people with an average age of 40 took part in the research, published in the journal *Acupuncture in Medicine.*

All had suffered from fear of the dentist for between two and 50 years.

On previous visits to the dentist, three patients had had to have general anaesthetic, while six others had needed sedatives. In 14 cases, the treatment had to be cancelled because the patient could not go through it.

The patients received the acupuncture from their own dentists, who are all members of the British Dental Acupuncture Society. They had acupuncture needles inserted into their heads at acupuncture points GV20 and EX6, which have been reported to aid relaxation.

Using a well-known anxiety reporting scheme, the Beck Anxiety Inventory (BAI), the patients’ levels of distress were measured. Scores fell from 26.5 to 11.5 after acupuncture and all 20 patients were able to undergo treatment.

Statistics suggest that, in western countries, phobias afflict seven to 15 per cent of the population and that women are twice as likely to suffer from a phobia as men. However, as many people do not feel comfortable talking about their phobias, it is thought that this figure could be a lot higher.

Dr Palle Rosted and colleagues from the UCL Eastman, which is part of Barts Health NHS Trust and based in London, carried out the research. They said more studies are needed but concluded ‘acupuncture prior to dental treatment has a beneficial effect on the level of anxiety in patients with dental anxiety and may offer a simple and inexpensive method of treatment’.

However, the NHSChoices website noted that the study did not include a control group of people not receiving acupuncture to compare against.

This made it difficult to determine whether any reduction in fear seen in the treated individuals would have occurred naturally over time.

As no other anxiety treatment was compared, it is also not possible to say whether acupuncture would be any better than other approaches, such as hypnosis.

Changes for dental therapists and hygienists

Dental therapist and hygienists are to be allowed to administer local anaesthetics and supply fluoride supplements, under new changes.

The Medicines and Healthcare products Regulatory Agency (MHRA) is to allow dental therapists and dental hygienists to perform new functions under a Patient Group Direction.

These are the administration of local anaesthetics plus the sale, supply or oral administration of fluoride supplements and toothpastes with high fluoride content.

The Department of Health hopes to make the necessary amendments to the Medicines Act 1968 within the next three months.

Kevin Lewis, dental director for the indemnity and risk management advisers Dental Protection, welcomed the change and said: “As an organisation, that is very much at the heart of the profession, Dental Protection has long been aware of the frustration and dento-legal danger created for dental hygienists and dental therapists created by existing legislation. I am delighted to hear from the chief dental officer that this unintended consequence will soon be removed.”

Clinical Innovations Conference

Education and training provider, Smile-on, is hosting this year’s Clinical Innovations Conference, along with the AOG and the Dental Directory.

Now in its seventh year, the Clinical Innovations Conference (CIC) will be held on the 7-8 May at the Royal College of Physicians in Regent’s Park, London.

Promising to be the biggest conference yet, the CIC programme has been put together in consultation with a panel of international experts with the aim being to update participants on new technologies, materials and techniques in dentistry.

The 2010 conference will host a line-up of highly prestigious international speakers alongside exhibitors offering the latest dental technologies from around the world.

A spokeswoman for Smile-on said: “Together with the AOG we have brought together an impressive programme that will be both inspirational and motivating, preparing your practice for the future and ensuring that you too are at the leading edge of dentistry.”

After the success of last year’s CIC, the Clinical Innovations Conference is growing and the 2010 conference is expecting delegate numbers in excess of 500 highly motivated dentists who are passionate about learning.

For more information call 020 7400 8889 or email info@smile-on.com.

Course in sports dentistry

The UCL Eastman has joined forces with the London Sports Institute of Middlesex University and is offering a course for dentists wishing to treat athletes.

The course will made up of lectures, seminars and clinical sessions along with practical and laboratory skills.

It will explore:
- The recognition of neurological injury
- Healing of hard and soft tissues to include suturing
- Stress and TMJ dysfunction

In addition to the dental and maxillo-facial subjects, there will be lectures and demonstrations on sports physiology, psychology of sports injury, diet and nutrition, therapeutics and drugs in sport plus medicolegal aspects of dental injuries.

The course may be taken as either an optional module of the Restorative Dental Practice programme, or as a stand-alone course.

For further information or to register for September 2010, please contact the programme administrator on 020 7905 1281 or visit www.eastman.ucl.ac.uk/cpd.
Editorial comment

Going up in smoke

S o the General Dental Council is dipping into its reserves to the tune of £5m to get through the backlog of Fitness to Practise cases sitting in its case files. This is not only the reason for the funding; Revalidation, Overseas Registration Exam regulation, Customer Advice and Information Team capacity… many of the facets of the GDC’s regulatory role need additional funding to cope with the rise in demand of the GDC’s services.

It is good also that the GDC has decided to share this fairly critical set of documents with the public and practitioners—it gives an air of transparency to an area of the Council’s operations that can be given to rumour and conjecture.

Of course the document does not give happy reading that one of the ways in which the GDC will have to fund in the future is to raise the Annual Retention Fee (ARF) by up to £100 for dentists (DCPs are not specified in the document). In these cash-squeezed times, anything extra that has to be paid out will be unpopular; the flip side is of course that dentists have had the ARF frozen for the last couple of years.

Interesting times indeed for 37 Wimpole St.

As you read this I will be weather and beginning my trip to the village of Bukumbi to renovate a community centre and provide support for the charity Bridge2Aid with colleagues from Schulke UK and Henry Schein Minerva. It is a strange feeling having to mentally (and packingly) prepare for a trip that would be the experience of a lifetime, whilst having to hear about the doom and gloom of yet more delays in the reopening of the airspace. I have friends ‘stack’ (being trapped in New York doesn’t sound much like stuck to me) all over the world and I have been hearing stories of dental practitioners forced into expensive trips via hired cars and Eurostar (and don’t forget the poor unfortunates who are stranded in Singapore after IDEM last week!). In fact the only winners seem to be the temporary agencies that are doing a roaring trade in providing cover!

Anyway, back to Bukumbi. There is still time to support me and the team—go to www.justgiving.com/bukumbi-bound. And keep a look out for my reports from Tanzania after I get back! See, ever the optimist…

Erratum

Dental Tribune has received comment from Ingenious Media regarding the recently published column “A sensible alternative”, by Michael Lansdell (DT; Volume 4, Issue 6 pp 24-25).

Ingenious was the company featured in the Mail on Sunday article of 14 February to which Mr. Lansdell refers. There are two major errors in his piece to which they object:

1. Mr Lansdell refers to “the Inland Revenue’s position...that the arrangement was principally aimed at tax avoidance”. This is untrue. It is the job of the HMRC to distinguish between bona fide trading businesses and schemes aimed at simply exploiting tax benefits. As a matter of routine, all of our businesses are subject to rigorous scrutiny and have been found to be the proper manner. Given our track record, we are completely confident that HMRC will agree that we are doing a roaring trade in providing cover!

The AOG and Smile-on in association with the Dental Directory bring you

The

Clinical Innovations Conference 2010 | The state of the Nation

Friday 7th and Saturday 8th May

The Royal College of Physicians, Regent’s Park, London

World Class Speakers: Julian Webber, Kevin Lewis, Achim Schmidt, Eddie Lynch, Basil Mizrahi, Wyman Chan, Trevor Bigg, Jonathan Britto, Joe Omar, Seema Shama, Bruce Bernstein …many more to come.

Go to www.clinicalinnovations.co.uk or call 020 7400 8967
A dentist who refused to give a woman gas during surgery still represents a risk to patients, according to the General Dental Council.

David Henthorn told the woman she needed to have her teeth pulled out, but refused to give her gas during the procedure, despite her asking for it.

Henthorn failed to notice the patient's 'severe' loss of tissue and gum disease, despite her making frequent visits to his practice in Slack's Lane Heath, Charnock, Lancashire.

The patient told the General Dental Council (GDC), that her gums became 'baggy' in 2001 and abscesses appeared in June 2002.

In May 2007, the woman changed practices after Henthorn refused her requests for sedation. She then had to have nine teeth removed, the GDC heard.

In July 2008, Henthorn was only allowed to work subject to conditions, after being criticised for 'gross negligence'.

However at a new hearing, Jean Leitch, chairman of the GDC tribunal, said the dentist still represented a risk to patients. He said: “The committee has determined that it is necessary for the protection of the public and in your own interests that your conditional registration should continue.”

He then re-imposed 10 conditions on his practice for a further year.

These include informing the GDC of any professional appointment, allowing it to exchange contact details of any colleague prepared to take on his practice and notifying the GDC of any formal disciplinary proceedings taken against him.

Multi-media dentist guide

People in Scotland looking for information on NHS dentists can now go to a website or watch a DVD available in 17 different languages.

The new multi-media NHS services guide has been launched to raise the profile of all the major services offered by NHS Scotland.

The ‘How to use the health service in Scotland’ initiative comprises of a website, online videos and resources and a DVD, available in 17 different languages including British Sign Language, giving information about dentists, family doctors, opticians, pharmacists, and out of hours services.

There is an introduction which contains some important general information, and a short section on how to give comments, whether good or bad, about services.

Nicola Sturgeon, the Cabinet Secretary for Health & Wellbeing said: “Our aim is to put patients at the heart of the NHS and make them partners in their own care. Initiatives like this will help us achieve this. Good patient care depends on understanding patients’ needs and effective communication is key to this.”

Memory decline research

Breakthrough scientific research has suggested there could be a link between having a low number of teeth and poor memory.

The study, specifically related to memory decline, examined the participant’s from a series of cognitive assessments and their ability to recall words.

The results showed that people with fewer teeth scored lower than those with more teeth in the first examination and declined far quicker after further testing in later years.

Chief Executive of the British Dental Health Foundation, Dr Nigel Carter, says this study adds to a growing list of evidence of the wide ranging systemic links relating to poor oral health.

Dr Carter said: “Heart disease, strokes, diabetes, lung disease and pre and low weight babies have all been found to be linked with poor dental health. This latest research could highlight yet another worrying risk factor of having poor oral health.”

Participants were aged between 75 and 98 years old and were mostly of a high education background – 85 per cent had a bachelor’s degree or greater while 88 per cent were teachers or professionals by profession.

They were assessed by the Delayed Word Recall test, which involved the subjects being presented with ten words, waiting five minutes and then testing them for how many they could remember.

Each participant had their score recorded in three consecutive years.

Results showed that participants with more than ten teeth achieved an average recall of 5.5 words at age 75, while those who had less than nine teeth only averaged three. By the age of 90 those who had more than ten teeth still averaged 5.5 words, however, those who had between zero and nine teeth fell dramatically and could only average a recall of less than two words.

Low levels of education were also associated with missing teeth. While only 14 of the 144 participants were of a lower education, 86 per cent of these individuals had less than nine teeth, compared the 50 per cent of those with a better education.

The study was conducted at the University of Kentucky in America with lead author Pam Stein and published in the Journal of Dental Research.

They also managed to establish a link between a low number of teeth and a person’s genes.

It has previously been proved that gum disease is the major cause of tooth loss in adults.
Best in Class
World’s Leading Light-Activated Whitening System

See what leading dental professionals are saying about Zoom!

“Zoom provides me with the option of a reliable, fast technique for tooth whitening for many of my patients who wish to have a brighter smile. The Zoom kit is easy to use and Discus Dental provides great support and literature for the patient. I would recommend all dentists who wish to include tooth whitening as a treatment option to consider Discus Dental as their preferred supplier.”

MICHAEL THOMAS
WESSEX DENTAL SPECIALIST CENTRE
Fareham, Hampshire

“Zoom Advanced Power is an extremely patient and professional friendly whitening system, and consistently delivers the results we expect for our patients.”

DISCUS DENTAL
GDPUK launches dental exhibition website

GDPUK, a website for dentists wanting to share ideas and information, has recently added a dental exhibition review section to its site.

Everyone who is working within the dental arena, including the exhibitors at the events, who are registered on GDPUK, can access the section, Dental Show Reviews.

The section has information about dental exhibitions and conferences and dental professionals can compare key aspects using a simple star rating system.

The site benefits from being an independent source of information.

Exhibition visitors will be able to rate the events on an ongoing basis so comments will always be up to date and relevant.

Information provided by organisers, the quality of speakers, general organisation, value for money and usefulness are amongst the aspects that are rated.

Tony Jacobs, owner of GDPUK, a practising dentist in Manchester, said: “We all know that different events appeal to different people depending on type of practice, specialist area or if seeking new equipment for the practice or laboratory.

“This online service helps members of the team to select the event most suitable to their needs and give preference to the events rated highly.

“We all have to ensure that if we take time out of the practice, it is vital to get the maximum return and making a wise choice about the dental event to attend is the only way of assisting this.”

Anyone rating a dental event that they have recently attended, will be entered into a draw to win an iPod Nano!

It takes only a few minutes to register free on the site, visit www.gdpuk.com to register and http://www.dentalshowreviews.co.uk to vote.

A new diagnostic tool to help detect oral cancer in its early stages has successfully been developed by researchers.

The highly-receptive instrument, which looks similar to a toothbrush, is able to achieve extremely accurate results by lightly touching a lesion on the tongue or cheek.

Trials carried out on the nano-bio-chip sensor showed it was 97 per cent ‘sensitive’ and 93 per cent specific in detecting which patients had malignant or premalignant lesions – results that compared well with traditional tests.

Chief executive of the British Dental Health Foundation, Dr Nigel Carter, has welcomed the new technology into the dental practice.

Dr Carter said: “Mouth cancer is a deadly and debilitating disease that would greatly benefit from such early diagnostic technology as the nano-bio-chip.

“Currently the best chance of beating the cancer comes from early detection, which improves survival rates to 90 per cent.

“Mouth cancer is a potentially fatal condition that is taking more lives each year. Without early diagnosis, chances of survival plummet to 50 per cent.”

If introduced, the brush could be used by dentists while treating patients in the dental chair during a regular appointment.

The minimally invasive technique would deliver results in 15 minutes instead of several days, as lab-based diagnostics do now, and offer an alternative to often invasive, painful biopsies.

A larger trial involving 500 patients has been planned, while researchers hope the eventual deployment of nano-bio-chips will dramatically cut the cost of medical diagnostics and contribute significantly to the task of bringing quality health care to the world.

In the United Kingdom, approximately 5,000 people are diagnosed with mouth cancer each year, claiming the lives of almost 2,000, making it the UK’s fastest growing cancer.

Mouth cancer has previously been found to be more common in men than women and people over the age of 40, though an increasing number of women and young people are developing the condition.

The new nano-bio-chip was developed by Prof John McDevitt and his team at Rice University in Houston, Texas.

The study appeared online in the journal Cancer Prevention Research.
A pensioner has been banned from a dental surgery for life, after he left a hoax bomb outside the surgery.

Peter McShane, aged 84, put a ticking clock inside a box with wires showing and left it outside Rush Street dental surgery in Pembroke Dock in Pembrokeshire. Police closed off the area and evacuated nearby residents from their homes. The box was destroyed in a controlled explosion.

McShane, who lives very close to the surgery, was among those who were asked to leave their homes, yet he still did not tell the police that the bomb was in fact a hoax.

He was caught on CCTV camera and he admitted to leaving the hoax bomb and vandalism when he was arrested.

Swansea Crown Court heard that the hoax bomb was the latest in a string of attacks on the surgery, after being charged £187 for dental work in 2002. The money was later refunded to him by the surgery, but he still carried out the revenge attack.

His barrister, Georgina Buckley, said he was ‘extremely remorseful’ and added that he had not fully appreciated what he was doing and was shocked by his behaviour.

McShane received a 34-week suspended jail sentence and a curfew order.

Judge Keith Thomas called him a vindictive man ‘determined to get his own back on people who had upset him’.

The judge said the offences would normally attract a prison sentence, and it was only because of McShane’s age that he was agreeing to suspend the jail term.

McShane was also placed under a 12-month supervision order, banned indefinitely from visiting the dental surgery, and also placed under a curfew between 8pm and 8am for the next three months.

A dentist and his ex-lover, who have been charged with murdering their partners nearly 19 years ago, have been sent to the crown court for trial.

Colin Howell, 51, and Hazel Stewart, 47, appeared at North Antrim Magistrates’ Court in Coleraine, Northern Ireland, and were told they will be tried for murder at Antrim Crown Court.

The trial is expected to go ahead later in the year.

Howell and Stewart, have been charged with murdering his wife Lesley, 31, and Stewart’s husband, 31, in May 1991.

Their bodies were found in a car filled with exhaust fumes at a garage behind a row of houses in Castlerock, Co Londonderry.

Howell, who once ran a dental implant clinic in Ballymoney, Co Antrim, has been in custody since his arrest and was sent back to Maghaberry Prison, near Lisburn.

Stewart was granted continuing bail but she must report daily to police in Coleraine. She has already handed over her passport.

Howell was known as a top implant specialist. He did a lot of lecturing in the Middle East and was hired by King Abdullah II to teach his own team of dentists the latest techniques.
