Lightening the load

Dr David Bloom and Dr Jay Padayachy of Senova Dental Studios discuss the benefits of high-tech equipment

1. Digital radiographs and portable x-ray heads such as the Nomad mean that all the convenience of instant radiographs along with the resultant reduction in radiation dosage are available.

Not only are patients impressed by this technology, the advantages for the practice include time savings and also cost savings from not having to process the radiographs manually. Storage is no longer an issue and radiographs cannot get lost or misplaced or mutilated. Many courses are also available to allow your team members to take the radiographs themselves. See Figs 1a and 1b.

2. Digital SLR camera. This is an essential piece of equipment on many fronts for diagnosis, patient communication and laboratory communication. A picture speaks a thousand words and never is this truer than with dental photography. Seeing a picture of their teeth on a 17-inch monitor aids co-diagnosis. This can also be extended to include intra-oral cameras as they also greatly aid patient communication and co-diagnosis.

Intra-oral cameras are very useful when preparing teeth, for example when removing an old amalgam filling to show any internal fracture lines that are present, so that this can be documented. See Fig 2.

3. Air abrasion unit. There are many available and each have their pros and cons. However, as a treatment modality, this is considerably underutilised and has many advantages ranging from minimal preparation to better bond strengths for adhesive dentistry.

While some of these advantages can be achieved through a lower-tech, intra-oral sandblaster, these will not actually cut tooth tissue which air abrasion does. It can do this very conservatively and often without the need for local anaesthetic. With the advent of hydro abrasion, the mess often associated with this technology is also greatly reduced. See Fig 5.

4. Patient-entertainment systems. Some pieces of equipment can seem high-tech but can avoid the expensive price tag often associated with this type of equipment. One such example is patient DVD glasses. These can be connected to a portable DVD player to allow patients to watch a film programme during their treatment.

These systems can be very technical and involved, but they can also be as simple as a portable CD player with headphones. These little touches make all the difference to the patient experience. See Fig 4.

5. Dental Lasers have come down in price considerably over the last six years resulting in soft tissue diode lasers at affordable prices. They now cover a variety of procedures ranging from cosmetic

CO-OP.R8 Seminars Proudly Presents:

William ‘Bo’ Bruce, DMD
David R. Newkirk, DDS

“What MUST I have to treatment plan aesthetic cases?”

This hands-on course is designed to answer that question. Knowing how to prep and cement veneers is not enough to go forward with a comprehensive case. We must know what information and materials we need to put the puzzle together.

This course will give you the blueprints to any complex case in a simple and understandable way. You will learn not only the aesthetic requirements but also the functional necessities to the perfect case. Not required, but would be a real bonus if your dental assistant could attend with you.

This is a must take course for any dentist wanting to do more complex aesthetic and/or functional cases.

Course Synopsis

- Why and how to take a face bow
- How to predict and easily verify a proper joint position
- How to diagnose a healthy joint from a problem joint
- How to verify mountings of all model work
- Pearls that will make every case 100% more predictable

14 hours of CPD

This two day Hands on masterclass will be held at the prestigious Senova Dental Studios, Watford, Hertfordshire on Saturday 25th and Sunday 26th April 2009.

Book early to avoid disappointment for just £995 plus VAT.

To secure your place please contact info@coopr8.com tel: 01923 655404
