New Picasso laser launched by Velpeau

The Picasso laser contains two lasers: a 7 Watt laser (power) Gallium Aluminium Grown (GaAs) diode laser and a small laser marker: The GaAs laser is ideal for soft tissue (gum) work – as it does not interact with hard tissue. The laser used is a diode laser in diamond and is used for cutting and removing the energy of the laser is fibre delivered - the smallest available fibre capable of 250 microns.

Velpeau Diode Laser is very easy to operate with a user menu, handy for the operator to change - to navigate with. The unit can itself be carried onto or into standard dental cabinets. The Laser fibre is fine and is precisely directed, but the laser energy is delivered – the smallest available fibre capable of 250 microns.

The X-tensor for Pain - Elbow

The X-tensor® is an innovative pain relief device that is designed to help people suffering with arthritis. It is designed to relief pain in the elbow and the X-tensor® works by applying pressure to the affected area. The device is light and comfortable to wear and can be used throughout the day. The X-tensor® is ideal for people who suffer from arthritis in the elbow and looking for a natural way to relieve pain. For more information visit stand B13b or call 01204 358724.

The BDA / DENTSPLY Student Clinician Programme: A fantastic opportunity

Liza Durning describes her involvement in this very successful programme.

"I found out just before Christmas that I had been selected to represent Manchester Dental School, which was a great honour. To be one of the fifteen finalists also felt like a significant milestone. I gained a great deal of confidence understanding the challenge ahead and handling pressures with a far more professional approach."

I was having an investigation into how cancer spreads, and the role of a particular molecule in the metastasis; seen in the metastasis process. The Student Clinician Programme was a great opportunity to share with a wider audience a topic that I have found fascinating since being introduced to the world of cancer.

The BDA / DENTSPLY Student Clinician Awards in Edinburgh was a fantastic event. I got to meet the finalists from the other dental schools and see the research they had presented.

With regards to my talk the audience were as great an shock as I hadn't expected to win. I am absolutely thrilled to win and I'm looking forward when I fly to Orlando to take part in the International Student Clinician Conference."

UCL Eastern CPD launches challenging new programme

"Developing Leadership and Clinical Excellence within the BDA"

The UCL Eastern Dental Institute, with the support of the Chief Dental Officer and the Department of Health, is excited to announce the Autumn 2010 launch of a unique new programme, bringing together leadership and clinical excellence within the UCL. This programme is ideally suited to general dental practitioners who are seeking to develop new practices or re-evaluating existing practices.

The programme comprises three modules covering: Clinical Excellence:  This module will provide a comprehensive overview of the day-to-day running of an efficient and successful practice. This part-time programme will run over four 3-hour modules, between 3-6 June 2010, at the UCL Dental Institute, the University of London. Leadership and Clinical Excellence:  This module will cover the five leadership domains outlined in the Medical Leadership Competency Framework (2009); namely demonstrating professionalism, and clinical excellence. Clinical Leadership and Service Delivery: This module will cover the five leadership domains outlined in the Medical Leadership Competency Framework (2009); namely demonstrating professionalism, and clinical excellence. Clinical Leadership and Service Delivery: This module will cover the five leadership domains outlined in the Medical Leadership Competency Framework (2009); namely demonstrating professionalism, and clinical excellence.

"TBlue" marker system, precision is guaranteed in marking and documenting performances. However, high contrast images of the operator's hands are required to make the radiolucent appearance visible, which means that the X-tensor® can be used for a variety of treatments in the hands.

For more information visit stand B13b or call 01204 358724.
