Looking at Cone Beam Technology

Digital Dental has the range to suit every requirement and budget.

Digital Dental offers a complete range of cone-beam digital imaging systems.

The entry-level Unit-3D is a combined panoramic and small FOV cone beam system which can be upgraded with a one shot Ceph for orthodontic use. The range is completed with our multi disciplinary practice system which carries out implant dentistry.

Top of the range, the RevX 3D is the first system to offer true FOV ranging from 3cm x 5cm to 15cm x 15cm. This further extends the range of diagnostic capabilities and includes various default values for greater operator convenience.

All of the systems automatically switch between the panoramic and CT sensor and can repair your existing CDP - enabling you to scan every type of image without the need to purchase more than one device.

The 3D images are viewed with the powerful EZ3D software. They deliver all the anatomical information for single up to multi-implant placement, and are ideal for precise endodontic, orthodontic and periodontal diagnoses.

For further information call Digital Dental on 0800 527 8393, email digital@digitaldental.co.uk or visit www.digitaldental.co.uk.

Qualidrive

Handbooks On Training Sessions Now Taking Bookings

General Medical are UK Distributors for Qualidrive, the computer controlled anaesthetic system that delivers profound anaesthesia quickly, easily and painlessly. They will be running Hands-On Training Sessions in Glasgow (Friday 18th June ), Edinburgh ( Saturday 19th June ), Southampton (Friday 17th September), Bath (Friday 20th November).

Qualidrive enables Dentists to perform Osteonetal Anaesthesia whereby a small amount of conventional local anaesthetic is placed in the spongy bone in between teeth. Eliminating the need for painful injections, block and palatal injections it delivers a profound anaesthesia almost instantaneously; a real bonus for the Builder, especially when treating children and other potentially nervous patients.

Using Qualidrive is possible to anaesthetise between 2 and 8 teeth with just one injection without the need for additional palatal or buccal injections - enabling more treatment to be performed per session.

Please visit our website or contact General Medical on 013007 54999, visit www.generalmedical.co.uk or email info@generalmedical.co.uk.

Nusonic: NFC for effective instrument decontamination

Blackwell Supplies understands the central role decontamination plays in today's dental practice and offers Nusonic, an advanced cleaning solution.

Nusonic is an advanced instrument cleaning solution designed for use in autoscope cleaners. The advanced formulation provides dental practitioners with a cleaning system that is not only easy to use, effective, but also brightening and degreasing.

Nusonic NF cleans to the extent of an adult rust inhibitor, to ensure the longevity of instruments while decontaminating effectively.

Available in both 1 and 5 litre amounts, the concentrate is easy to dilute to meet specific cleaning needs, for convenient and economical provision of the highest standards of infection control.

As one of the country's leading suppliers of specialist products to the dental profession, Blackwell offers Nusonic as the solution to effective instrument decontamination.

For more information please call John Jessop of Blackwell Supplies on 020 7224 1457 or fax 020 7224 1694
