Mectron, based in Italy, has revolutionised dental surgery with their development of piezoelectric bone surgery. Recently, the company presented the 3rd generation of their Piezosurgery device at the IDS show in Cologne in Germany. We spoke with company founders Domenico Vercellotti and Fernando Bianchetti, as well as area managers Wolf Narjes and Alexandre Cadau, about the clinical advantages of their invention and how the company is reacting to the current market conditions.

Dental Tribune: Market prospects for 2009 are rather uncertain due to the financial crisis. Is your company prepared for a potential economic slowdown?

Wolf Narjes: Being a family-owned company, Mectron is

Fernando Bianchetti: The only way to withstand this crisis is to remain successfully in the market through investments in scientific and technical research, in Europe and other countries.

Domenico Vercellotti: What Fernando just said has always been our corporate philosophy; it will certainly help us in difficult times like this. Mectron offers high quality products at reasonable prices and puts a lot of effort into the development of new technologies and not merely into expensive marketing campaigns.

Domenico Vercellotti: We are currently undertaking more revolutionary projects’

probably more flexible and manageable than larger companies. Therefore, we can react relatively quickly to unexpected market changes.

Have you already experienced an economic climate change in Italy and other markets?

Fernando Bianchetti: Since our company was founded in 1979, we have already had to go through occasional tough economic times. However, nothing really compares with the latest financial crisis.

Alexandre Cadau: Fernando is right. At the moment, we are experiencing a huge loss of confidence in all consumer groups. On the other hand, we have always been challenged by the depreciation of various foreign currencies, like in 1992 when devaluation hit many countries.

Wolf Narjes: I have found that several countries, including South Korea, Italy, and Germany, have been very open-minded to this new technology. Most Scandinavian countries, however, have only begun to understand how to use this innovative technique.

Fernando Bianchetti: All the clinical protocols and techniques developed for Piezosurgery are based on scientific publications endorsed by universities and credible specialists in the field of dental surgery. They confirm not only the benefits for the clinician, such as maximum surgical precision and wider intra-operative visibility, but also those for patients who suffer from less postoperative pain.

Alexandre Cadau: Piezosurgery has certainly been one of the most important developments in the dental and medical field. This unique device allows the surgeon to work in less stressful and safer conditions. Postoperative healing times are also reduced threefold with this method.

Domenico Vercellotti: The latest innovation is tips for the implant site preparation that have demonstrated histological benefits and a better osseointegration of implants compared to the traditional twist drill (Giuliano Preti et al., ‘Cytokines and Growth Factors Involved in the Osseointegration of Oral Tita- nium Implants Positioned using Piezoelectric Bone Surgery Ver-

We’ve refocused our vision…

the advantages are clear

Unique improved “Galilean Telescope” magnifying system with dual achromatic German lenses – for a perfect image

Top quality Hoya carrier lenses – with multiple possible configurations including varifocal

Special face shield adapter – half face and full face shields can be easily attached

Ultra-lightweight metal ocular casings – to prevent scratching and splitting

Ultra-lightweight metal ocular casings – to prevent scratching and splitting

Thinnest possible super high index carrier lenses – including aspheric for even thinner edges

Available in 2.3x, 2.8x, 3.5x and 4.2x

Galliano – all with short barrels

As the UK’s No.1 supplier of loupes and lights, our vision is to supply the very best precision products, combining exceptional quality with outstanding design.

Our new loupes and lights are expertly custom-made by leading supplier ExamVision™. Founded by Jan Rønvig and optometrist Kim Jensen, ExamVision™ offer a welcome commitment to delivering superior design and quality craftsmanship, which perfectly complements our 16 years of unrivalled loupes experience and outstanding customer service.

Our vision has always been to exceed our customers’ expectations and we are confident our exceptional service combined with the superb quality of ExamVision™ loups and lights will refocus your vision too!

Wolf Narjes: Our Piezosurgery device is scientifically approved and we are considered to be the only company in this field to have a clinical database on each available surgical instrument. All the clinical applications for the device have been studied, to ensure that there is no risk for users and patients and that the medical effects are always positive. Many companies have attempted launching similar products, but they are still missing scientific data or research regarding the effectiveness of their methods.

Would you tell us more about how Piezosurgery was developed and how it has been received in different markets?

Domenico Vercellotti: The new technology was invented piezoelectric by Prof. Tomaso Vercellotti at Mec-tron in collaboration with Prof. Tomaso Vercellotti in 1980. It is based on the piezoelectric effect, which allows the conversion of mechanical energy into electrical energy and vice versa. The piezoelectric bone surgery device was developed by Domenico Vercellotti and colleagues in the late 1980s and early 1990s.

Wolf Narjes: Our Piezosurgery surgical telescopes are designed to be comfortable to wear and to provide maximum precision in surgery. They are available in a variety of lens powers and frame colours to suit individual needs.

Fernando Bianchetti: The technology is based on the piezoelectric effect and is used to cut bone during surgery. It allows for a more precise and less invasive surgical procedure, reducing the risk of complications and improving patient outcomes.

Alexandre Cadau: We are proud of the contributions our company has made to the field of dental surgery, and we will continue to innovate and improve our products to meet the needs of our customers.

Domenico Vercellotti: The technology has been received positively in different markets. It has been licensed to several companies, and we have received positive feedback from customers and clinics around the world.

Alexandre Cadau: Piezosurgery has been used in many countries, including the United Kingdom, France, Italy, and South Korea. The technology has been well-received, and we have received positive feedback from customers and clinics around the world.

Our vision has always been to exceed our customers’ expectations and we are confident our exceptional service combined with the superb quality of ExamVision™ loups and lights will refocus your vision too!

Dental Tribune

Training courses are regularly offered at the Piezosurgery Academy in Italy. Do you also offer courses in other parts of the world?

Domenico Vercellotti: Piezosurgery Academy was established by Prof. Tomaso Vercellotti to give scientific support to the Piezoelectric Bone Surgery. It is managing the whole clinical research and training activities in Piezoelectric Bone Surgery and works independently from Mectron.

Wolf Narjes: It is essential to be suitably trained in this technique. Therefore, we offer courses in Europe, Asia, as well as North and South America. Last year, we opened a new branch in Phuket in Thailand that serves as the Piezosurgery training centre for the whole Asia Pacific Region.

Alexandre Cadau: There is a reason that training is crucial for Piezosurgery. Users experience a steep learning curve before getting used to the micrometric movement of Piezosurgery, which is completely different to the traditional techniques. We organise workshops in many countries around the world that help dentists learn the differences between Piezosurgery and conventional burs and saws. In addition, we collaborate with universities, to offer attending clinicians cadaver dissection courses that help them appreciate the surgical benefits.

With four regional headquarters, do you consider yourself a global cooperation?

Fernando Bianchetti: Certainly, our branches in Germany, India, and the Asia Pacific region report to our headquarters in Italy. In other countries, we have worked successfully with local dealers for almost ten years, in some countries even 20 years.

Wolf Narjes: If you mean: are we represented in all the important countries around the world, then definitely yes. Our network is well established in more than 80 countries, and our sales team is working daily to extend it even more.

How closely do the regional headquarters work with the headquarters in Italy?

Domenico Vercellotti: In Mectron’s corporate organisation, the regional headquarters represent points of information exchange and contact between the headquarters in Italy and local clinicians.

Fernando Bianchetti: They work very closely with our main headquarters in Italy for different reasons. Mectron Italy helps the regional headquarters and, of course, our other distribution partners to provide their customers with technical support. The staff at regional headquarters, as well as our distribution partners, are regularly trained by our engineers in Italy.

Alexandre Cadau: All Mectron partners receive marketing support through the headquarters in Italy. In this way, we ensure that all our staff and partners, whether an Italian dealer or South American distributor, keep up to date with the latest specifications and developments of our products.

Wolf Narjes: I have to add that although marketing is centralised, the structure of our company is still flexible enough to fulfill local demands.

Do you have offerings in other market segments as well?

Fernando Bianchetti: Let’s speak about the other products Mectron has been manufacturing for plenty of years like piezo-electric scalers, curing lamps and air polishers. Mectron was the first company to introduce on the market a scaler handpiece in titanium which has represented the new state of the art in life span and sterilization, as well as the first one to launch a LED curing lamp!

Wolf Narjes: Mectron has a lot of capacity for innovation. Therefore, our company is not only a leader in the field of the Piezosurgery technique, but also in the light curing segment.

Alexandre Cadau: We say we have succeeded to be a long-term market leader. As far as the production of LED curing lights is concerned, our company is still one of the biggest manufacturers worldwide.

Many companies are starting to extend their range of products. Are there any new products being developed that you would like to talk about?

Fernando Bianchetti: Apart from the further improvement of existing products, we are currently undertaking more revolutionary projects in our R & D department. A total of fifteen per cent of all staff working at Mectron are actually involved in this.

Domenico Vercellotti: Our mission is to implement new technologies for the dental market that are based on the latest evidence-based research. We will also stay on this track in the future to develop innovations that are economical and bring true clinical advantages.

Thank you all very much for the interview.
