Spring forward

BOS members Fiona Ryan and Zahra Sheriteh report on the recent British Orthodontic Society's spring Meeting in Dublin

The British Orthodontic Society's Spring Meeting was held at the Royal College of Surgeons of Ireland in January last year. Following its detailed overview, the event included a series of lectures and seminars. The aim of the conference was to provide an introduction to the latest developments in orthodontics, with particular emphasis on the importance of comprehensive treatment planning.

The meeting was attended by around 300 delegates from across the globe, including orthodontists, dentists, and dental hygienists. The program included a series of oral and poster presentations, as well as interactive workshops and panel discussions.

The conference was opened by the President of the British Orthodontic Society, Dr. David Bowden, who welcomed delegates to the meeting and outlined the agenda for the event.

The first session of the conference was devoted to the latest developments in orthodontic technology. Dr. Sarver, a leading expert in the field, presented an overview of the current state of the art, highlighting the latest advances in orthodontic treatment planning, including the use of digital technology and 3D imaging.

The second session focused on the latest developments in orthodontic treatment for growth and development. Dr. Sarver emphasized the importance of early intervention and the role of comprehensive treatment planning in achieving optimal outcomes.

The third session of the conference was devoted to the latest developments in orthodontic treatment for aesthetic outcomes. Dr. Sarver highlighted the importance of considering the patient's overall appearance in treatment planning, and emphasized the role of comprehensive treatment planning in achieving optimal aesthetic outcomes.

The fourth session of the conference was devoted to the latest developments in orthodontic treatment for functional outcomes. Dr. Sarver emphasized the importance of considering the patient's overall function in treatment planning, and highlighted the role of comprehensive treatment planning in achieving optimal functional outcomes.

The final session of the conference was devoted to the latest developments in orthodontic treatment for psychosocial outcomes. Dr. Sarver emphasized the importance of considering the patient's overall well-being in treatment planning, and highlighted the role of comprehensive treatment planning in achieving optimal psychosocial outcomes.

In conclusion, the conference was an excellent opportunity for delegates to learn about the latest developments in orthodontic treatment planning, and to network with colleagues from around the world. The conference was well-attended, and provided a valuable learning opportunity for all who attended.
