Unbeatable Top quality Handpieces from KaVo

KaVo, the leading manufacturers of proven, high-quality handpieces, offers an extremely flexible range of precision turbines and slow-speed handpieces to meet all your needs and budgetary requirements.

KaVo’s extensive range includes the exceptional quality GENiE/ponentLux Slow Speed range and the GENiE/tensE 8000 series, the ultimate turbine offering power and precision. Design with ball-bearing ergonomics and ideal geometry these handpieces create more working space in the mouth, improving access and visibility. The compact 1mm handhead enhances its effectiveness without compromising mobility and flexibility. The GENiE/tensE turbine offers the ideal head size for restricted spaces.

To look after your inventions, ask for information about the KaVo SIRONA® automatic matrix system for the cleaning and care of handpieces. Designed for trouble-free cleaning, purging and lubrication of up to four handpieces simultaneously within 1 minute.

For further information on the full range of KaVo products please contact your KaVo sales representative or visit www.kavo.de.

Clinical

dr. louis mckenzie presented a popular seminar titled a practical guide to posterior restorations' which included SDR, and dentists from all disciplines were eager to expand their practice.

DENTSPLY

DENTSPLY’s FastFinish®. Get your hands on the most successful instruments! It is not difficult to understand why DENTSPLY’s FastFinish® range is such a success within the UK hand Instrument Market.

Ergonomically designed with soft-grip ‘Identi-hand’ handles, FastFinish® hand instruments fit perfectly in your hand and provide a larger working area. With a wide big gap at the working end and a narrow, elongated distal tip, the designed design helps stop hand fatigue and provides an easier grip and better instrumentation.

The range includes a selection of scalers, curettes and hoes, including a number of instruments also available with thinner tips - “allowing for finer work.” FastFinish® tips are replaceable, so should one break or be over sharpened, they can be easily replaced. Similarly, the handles can be bought separately, allowing you to fully colour-code your surgery.

For a limited time DENTSPLY is offering a promotion on FastFinish® hand instruments; buy 5 and get 1 free (copy invoice to DENTSPLY, please see web site for address). The whole range is available to view online at www.dentsply.co.uk, or for more information, book an appointment with your local DENTSPLY Product Specialist by calling 0800 072 3313.

SIRONALaser Advance sets new standards of Ease-of-Use and Flexibility

Today the SIRONALaser Advance offers a fast and flexible way to improve your patients’ care. With a wide range of treatments such as non-contact treatments as well as Surgery applications the new diode laser, due to its precise power setting offers even greater flexibility than ever before. The SIRONALaser Advance also allows you to store information about individual users as well as individual treatment sessions. Patient data can be transferred to patient records via a convenient USB Flash-drive.

The SIRONALaser Advance comes ready-to-use, with several preset programs for common laser applications and an intuitive user interface that allows you to start taking advantage of its convenient features and small footprint right out of the box.

For further information please contact: Sirona Dental Systems 0845 071 3540

Quality Endodontic Distributors Ltd

We have been scientifically proven that it is impossible to adequately clean and sterilize Endodontic instruments after use. The use of the handpiece with a high risk of stick on surfaces makes even attempting this fully. Consequently, DENTSPLY’s UnoDent Instrument range is specifically designed for use with handpieces and SteriFiles®. Both are supplied sterile and individually blister packed.

Sterifile® Nickel Titanium Instruments were developed to meet the demands of GDPs who were responsible of high contamination, within NHS conditions. They have an innovative cross section which allows more space for debris removal. Whilst retaining its core strength, it also allows excellent flexibility and maintains a perfect cutting edge. The non-cutting tip reduces the risk of perforations. UnoDent® is designed for conventional endodontic instrumentation. Supplied in R and T Type presentations they are manufactured from high-grade stainless steel which maintains both flexibility and strength. The K-Type file has an innovative non-cutting top tip, it is the first choice for preparing coronal and root canals.

For further telephone information Quality Endodontic Distributors Ltd on 01733 404999, email sales@qedendodontic.com, or fax 01733 361243 visit www.qedendodontic.co.uk or contact your local QED Salesperson.

nuview offers a comprehensive service including a survey of the practitioner’s orthodontic needs. “Nuview were great! They quoted a fantastic price for the product they supplied and were keen to expand their practice.”

Castellini – Quality and Reliability Guaranteed

Boasting a unique design and manufactured to the highest standard of micro-mechanics, Castellini Goldplated instruments become indispensable after the first use.

The shape of the IproxCheck® is a series of handpieces designed by Castellini that provides invaluable comfort to the practitioner, even during the most demanding procedures.

Goldplated instruments were designed in order to satisfy the stringent requirements within all fields of dental practice including implantology, endosurgery, embryology and general practice.

The features of Goldplated include:
- Light weight
- Extremely low noise
- Exceptional working precision
- Steam autoclavable at 130°C
- Optimised design
- Strength of material
- Close visibility of the operating field
- Can be used on all microniters with a standard handpiece

This range of instruments combines extraordinary manoeuvrability and lightness with quality and performance.

Synchronism with safety and reliability, Castellini products have gained the trust of many practitioners of the most demanding fields.

For further information about the comprehensive range of Castellini products call 0870 750 0219 or visit www.castellini.co.uk

“nuview’s Zeiss microscope has been a revelation for us. For unrequired optical clarity and state-of-the-art ergonomic design, dentists who demand only the best for their patients should look no further than Nuview’s range of microscopes. Developed by leading engineers at Carl Zeiss, the microscopes allow you to scrutinize the most minute detail and finest structures, enhancing the quality of your diagnosis and treatment procedures.”

Dr Shahab Mckenzie BDS (Lond), Principal Dentist at Excel Dental Care in London was presented with a new Zeiss microscope. “The microscope has been a revelation and has totally changed the way I work. The video attachment allows me to discuss exactly what is being done and I can take photos of the procedure, allowing my patients to get an understanding of the complexity of the treatment.”

Nuview has been supplying many of the survey of the practitioner’s equipment needs, full installation, training and prompt aftercare. Nuview also offers the revolutionary alcoholfree Contour ranging of dissection.

For more information please call Nuview on 01453 756369 or email info@nuview-hd.co.uk or www.nuviewco.co.uk

DENTSPYLAS new SDR at BDA Conference

Delegates visiting DENTSPLY’s stand at this year’s BDA Conference in Liverpool were treated to a very special event – launch, SDR – the smart dentine replacement that simplifies posterior direct restorations.

Dr. Louis McKenzie presented a popular seminar titled a practical guide to posterior restorations’ which included SDR, and dentists from all disciplines were eager to see how the newly patented posterior bulk-fill flowable composite could improve the treatment they provide.

SDR® has a flowable viscosity that enables a simple and efficient mixing technique that results in an instant putty effect. The easy-to-use 1-2-3 concept is fast and efficient, allowing the operator to mix the viscosity to suit a range of clinical situations. Conventional procedures require complex and time-consuming layering, but SDR® makes the entire process up to 40% faster than conventional techniques.

SDR® is completely compatible with most other composites and adhesives, SDR® minimizes shrinkage stress by 60%, significantly reducing the incidence of microleakage, sensitivity and decay.

In addition, SDR® complements other products in DENTSPLY’s comprehensive range of restorative materials and equipment to simplify posterior direct restorations.

For more information, or to book an appointment with your local DENTSPLY Product Specialist, call 0800 072 3313 or visit www.dentsply.co.uk
Congratulations to everyone who took part and here’s to next year’s event, to give recognition to a highly commended runner up and the category winner in each section: Aesthetic Implant Technician, Patient’s Smile and Facial Reconstruction. For more information please contact Ray Goodman, Goodman Legal, Lawyers for Dentists on 0151 707 0090, email rng@goodmanlegal.co.uk or visit www.goodmanlegal.co.uk

Dr Gill has developed a thriving private practice in Nantwich which offers cosmetic procedures as well as focusing on and advocating preventive dentistry. He also works as a business consultant and is involved in the launch of new products and ensuring their sustainability. Another of his recent roles is as Non-Executive Director of DentalXpress, the UK’s first social enterprise to address the problems of access to NHS dentistry and oral surgery and considered given to accountants’, agents’ and legal fees, together with a detailed breakdown of the stages of practice purchase transaction, market overview followed by valuable tips on how to speed the process along.
High-quality magnification and straight-through drills

Dentists have access to a full range of root canal instruments, which are manufactured to the highest possible standards of accuracy and precision. This includes the following:

- Optimax One-Step System (而导致)
- Implantologists Dr Shubh Dattani BDS, MFGDP(UK), DipImpDent RCS (Eng), and his team strive to stay on top of their game by taking part in advanced courses and seminars, and they have their own free time.

For more information on the Kent Implant Studio, contact Dr Dattani on 01747 830 057 or email info@kentimplantstudio.co.uk
