Digital Dental

Cone Beam CT scanning redefines 3-Dimensional cranio-maxillofacial imaging, and we are proud to bring this technology to your practice. The images produced by the Kodak 9000 CT scanner are ideally suited to 3D re-projection to accurately place impacted teeth, dental implants, extractions, TMJ disorders, orthodontics, and facial markings. 

The technology enables doctors to:

- Reconstruct facial images from sparse data
- Produce a detailed 3-D image of the head and teeth
- Identify potential issues with the patient’s oral structure

This user-friendly system has proved to meet the demands of implantologists and patients alike.

Gecko Ltd

Gecko is a high strength micro-hybrid composite system with the transparency, translucency and strength of zirconia.

The Chiropro L System includes the 20:1 contra-angle handpiece, which is the most powerful on the market to offer LED lighting at equal intensity at both the tip and contra-angle, providing unsurpassed illumination and optimum infection control.

Base materials: prehydrated cortical bone. The patented self-compacting granules are milled milled in the milling unit.

Sirona introduces the NS 1400 with new features such as:
- Eliminating the need for impressions, CEREC® utilises a digital impression taking technique to capture the data used to design the restoration which is milled in the uniting.
- The world’s first intraoral scanning system, which can scan all areas. Fitted with an exclusive double optical glass rod system, the handpiece provides uniform lighting of the operative field. This feature has proved to have demanded of implantologists worldwide and more.

PHILIPS sonicare

Get a feel for perfection.

It is a symbiosis of intelligent technology and unparalleled precision. A perfect match between the 3-Series, a single use, powerhandle, and the PHILIPS sonicare for Kids toothbrush.

The result is a treatment which irritates neither tooth nor gingiva — and which delivers smooth tooth surfaces without abrading the enamel. Essentials of feel-good practice: PHILIPS sonicare for Kids is an incomparable fit when used with EHS Series instruments made of ultrafine removable surgical steel.

How Clean is Your Surgery?

Can you guarantee that your surgery is germ free? The Saniswiss biosanitizer automate from Saniswiss disinfects your entire surgery overnight at just the press of a button. This surgery atomiser dispenses the revolutionary Saniswiss biosanitizer directly into your surgery. Being airborne Saniswiss biosanitizer will get to all areas of the surgery at once. A fine mist is dispersed from the Saniswiss biosanitizer atomizer, which combines with the oxygen in the air to give a 100% guarantee of a perfectly disinfected surgery.

Saniswiss biosanitizer atomiser provides you absolute peace of mind that there are no longer any germs lurking in the surgery. This product has been tested extensively in Europe’s leading laboratories and is proven to offer outstanding efficacy (active in < 30 seconds).

To find out more please call 0800 566108, e-mail info@Saniswiss.co.uk or visit www.Saniswiss.co.uk

In a randomized, controlled, observer blinded, parallel group six month trial, Shaarma et al concluded that for patients with gingivitis who brush and floss routinely, the adjunctive use of a mouthwash containing essential oil Listerine, Johnson & Johnson) provides a clinically significant and meaningful benefit in reducing plaque that can lead to gingivitis.

Mechanical methods of dental plaque removal have for many decades been based on the recommended twice daily toothbrushing and daily flossing.
