 Oppose fluoridation!

People of England, your future health may depend on what will happen in Southampton in the next few months: A heavily subsidised (£180,000 of your tax money, as well as a full-time ‘job’ worth more than £70,000 a year-see the Guardian) so-called public consultation is under way in Southampton. If the state is not met with enough public opposition, most of the Southampton water supply will be ‘fluoridated’ and the state will use this ‘victory’ to further its plan to do the same to many more poor people all over England.

Would you rather believe subsidised government propaganda or would you rather investigate for yourself and then decide?

Let’s start with a few quotes from more brilliant men than myself.

‘Government is an association of men who do violence to the rest of us.’

Les Tolstoy

‘Government is not reason, it is not eloquence, it is force. Like fire, it is a troublesome servant and a fearful master. Never for a moment should it be left to irresponsible action.’

George Washington

‘The ruling class has the schools and press under its thumb. This enables it to sway the emotions of the masses.’

Albert Einstein

‘Government is nothing but systematic coercion against the people, and coercion is a crime’. -

Henry David Thoreau, in Civil Disobedience

‘What a great advantage for leaders that the people do not think!’

Adolf Hitler

‘The individual is handicapped by coming face-to-face with a conspiracy so monstrous he cannot believe it exists.’

J. Edgar Hoover, former FBI Director (1924-1972)

‘If people let government decide what foods they eat and what medicines they take, their bodies will soon be in as sorry a state as are the souls of those schools that have fluoridated.’

The great American President Thomas Jefferson

You, the reader should investigate for yourself. The element fluor was part of all the weaponised gases in the first world war. Ongoing research immediately after the end of the war, both in Germany and the Soviet Union, showed how fluor, when added to tap water in prisons and concentration camps, had the effect of dumbing down, making the inmates sluggish, depressed, and devoid of initiative. Very useful to prevent risky dissent and uprisings! Also, it makes me suspect flour is not that good for our bodies!

The most expensive private clinics in Germany between the two world wars used a small amount of fluoride in bathing water for treating patients with OVARactive thyroid. After a few years this was stopped because it was devastatingly effective. All patients then had UN-OVARactive thyroids for the rest of their lives! Could it possibly be that a small amount of fluoride in the tap water you use to showerover your body is actually total poison to your thyroid?

Look up what the National Kidney Foundation in the USA thinks about fluoride and kidneys.

The solution used to fluoridate tap water is NOT natural Calcium fluoride, but sodium and silicofluoride WHICH HAS NEVER BEEN TESTED FOR SAFETY ON HUMAN BEINGS.

Also, the solution used comes from industrial scrubbers and contains heavy metals like lead.

It is illegal to medicate anyone against his will, so as long as there is one person in Southampton opposed to this fluoridating, it is illegal. This shows you how arrogant and preposterous it is to hold a public consultation in order to make it look acceptable to the public.

Use your intuition. Everybody has at least some, a dentist

(though this was a fall from 1.9 percent in the previous year).

Chief executive of the NIFS Information Centre, Tim Strange, said: ‘Today’s figures show long-term vacancy rates are continuing to fall across nearly all staff groups. This is good news for patients because low vacancy rates are likely to contribute towards better continuity of care.’

The three month vacancy rates are calculated by dividing the number of vacancies by full-time equivalent staff in post plus the number of vacancies. This ratio is expressed as a percent-age.

City Harmsworth said: ‘The North East Strategic Health Authority has the highest long-term vacancy rate across medical and dental staff groups at 1.6 percent

This is good news for patients

Colgate Oral Health Month

More than 85 percent of UK dental practices have registered to take part in Colgate Oral Health Month.

Colgate Oral Health Month by Colgate and the British Dental Association aims to inform the public and promote the importance of oral health.

A spokeswoman for the campaign said: ‘The 2008 campaign is focusing on delivering consistent preventive messages.’

She added: ‘Colgate Oral Health Month provides the entire dental team with an opportunity to get involved in a nationwide campaign that will be supported by TV advertising.

A road show will travel around major UK cities throughout September. Dental professionals will be at mobile toothbrushing units to give advice on oral health and demonstrate appropriate brushing techniques. They will each receive a practice pack that contains educational materials, a patient competition, motivational stickers and patient samples.

The continuous professional development (CPD) programme ‘Delivering Prevention in Practice – A Team Approach’ is available as part of Colgate Oral Health Month.

While working on the programme, the whole dental team will qualify for four hours verifiable CPD.

Visit www.colgateuk.com to download this interactive programme.

‘Highly effective’ GDC

Mr Mathewson added: ‘We are not complacent. The GDC report highlights some areas where we need to improve, and I’m pleased to say we have already started work on them. We have an ambitious work plan which includes launching a system for regularly ‘evaluating’ dental professionals (we’re on track to run pilots next year).

Another area where the GDC excels is public protection.

The GDC audits a random sample of registrants (CP) records and additionally reviews those of all registrants who have been late in submitting fee payment, for example, to ensure those who are poor at keeping on top of such things are not slack at keeping up with other requirements the GDC places upon them,’ said the report.
