Keeping with the home guard

When it comes to meeting the needs of UK patients, who better than a UK-based provider of orthodontic solutions? Andrew McCance explains.

Orthodontic treatment in the UK has been revolutionised by the latest advances. Thanks to the continuing research and development carried out by UK-based specialists, general dental practitioners can provide excellent and comprehensive orthodontic care for patients, treating the wide spectrum of malocclusions from mild to severe.

The introduction of the most advanced system has been timely. Patients across the UK were experiencing not just long waiting times in order to see an orthodontic specialist, but were also being forced to travel long distances, due to a shortage of experts. Now, forward-thinking dentists are incorporating orthodontic procedures into their list of treatment options to offer complete care to patients.

By utilising the leading system, which is organised into five distinct elements and includes a range of innovative and patented devices to ensure great results and optimum patient wellbeing, dentists can enjoy the benefits of a localised service. This is because the leading system, with its orthodontists and specialists, is based in the UK. This means that the dentist can contact the laboratory team easily – by simply picking up the phone – without having to think about time zones or request call-backs. Dentists know exactly where the work is being done when they request appliances to be pre-adjusted in the laboratory.

When it comes to meeting the needs of UK patients, who better than a UK-based provider of orthodontic solutions? Able to notice trends as they appear and develop, and respond quickly to them has let the experts behind the leading system bring their experience to bear on the range of appliances and devices available. With a system that makes use of clear medical-grade positioners, nickel-titanium wire, elastic mechanics and appliances for buccal segment setting and multiple adjustment, dentists can work with the orthodontic specialists at the laboratory to construct a suitable solution tailored to the needs of each patient.

As the UK’s No.1 supplier of loupes and lights, our vision is to supply the very best precision products, combining exceptional quality with outstanding design.

Our new loupes and lights are expertly custom-made by leading supplier ExamVision™. Founded by Jørn Rønvig and optometrist Kim Jensen, ExamVision™ offer a welcome commitment to delivering superior design and quality craftsmanship, which perfectly complements our 16 years of unrivalled loupes experience and outstanding customer service.

Our vision has always been to exceed our customers’ expectations and we are confident our exceptional service combined with the superb quality of ExamVision™ loupes and lights will refocus your vision too!
