“Foreign markets are very important to us”

An interview with Olaf Sauerbier, CEO of VOCO GmbH, Cuxhaven, Germany

The company Voco based in Cuxhaven at the northern coast of Germany is an established international provider of high-quality dental materials. Amongst products for restorative dentistry, they also offers a wide range of materials and preparations in the field of prosthetics and prophylaxis. Dental Tribune Group Editor Daniel Zimmermann spoke with Olaf Sauerbier, CEO for Marketing and Sales, about new products and aesthetic trends in restorative dentistry.

Daniel Zimmermann: The Association of Dental Dealers in Europe (ADDE) has recently predicted growth rates above 5 per cent for most European dental markets.

Olaf Sauerbier: To be honest with you, the recession never really caught us. We usually tend to perform slightly better than the overall market and expect to be no different for this business year. The year 2010 has started off better than last year ended and we have seen some significant growth in most of the business segments in Q1/Q2.

Although we have invested significantly in our German businesses by extending our sales team by 15 new employees, foreign markets are very important to us. At the moment, we are expanding our existing businesses worldwide, especially in North America. It will take a while before we are able to leverage sales of most of our highly flowable materials like Grando Flow, Grando Seal or lonoseal.

Our gingiva-shaded restoration system Amaris Gingiva has also shown a good performance. We have to admit that the market for such a product is still small but, on the other hand, we see the demand for aesthetic restorations of exposed necks of teeth increasing due to demographic changes and people getting older. Those who have highly aesthetic requirements will find it hard to pass by this product.

Another bestseller has been the one-component light-curing nano-reinforced self-etch bond Futurabond M that we launched in SingleDose and in a 3-bottle value pack. Not to forget the Re-bilda Post System, an awarded complete set for post-endodontic treatment for placing 15 posts, that has been sold successfully in Germany and abroad within a short amount of time.

There are some segments in dentistry, in particular dental implants, that are struggling with decreasing sales. How is the situation in the market segments you are involved in? The recession might have had devastating effects on companies offering upscale materials and equipment but the situation in restorative and preventative dentistry is looking much more promising. In the sectors we are

The DENTSPLY Academy Webinars are the convenient and easy way for you to stay ahead and learn about the latest developments in dentistry. You can even interact ‘live’ with the speakers during the lectures. Plus you get to do it all from the comfort of your own home or practice, you simply need a computer with internet access.

There are only 100 places available on each of our online seminars. So hurry and book your place on these popular events.
actively involved, such as prosthetics, prophylaxis or dental cements, we were able to achieve growth rates between 10–20 per cent last year.

Filling materials did not perform that well due to increasing market competition. There are plenty of new and innovative filling materials on the market right now and we have to invest a lot to stay ahead with new developments and products.

What trends do you see impacting the industry at the moment? All manufacturers are striving for a product that offers almost ideal properties for a filling material and exhibits the same physical properties as natural tooth substance. All our competitors are developing towards this ideal but I see us quite ahead.

When and where will it be available? It is already available in Germany and other selected European markets. Like its predecessor, Grandio®SO is now able to present another nano-hybrid composite to the dental community that has outperformed our original expectations. Taking all its physical properties into account, it is probably the most dentinoid material on the market.

Do aesthetics play a more prominent role in the development of a composite? The primary goal is function. There is a place for aesthetics, too, but it must not compromise functionality or the stability of the filling. There are different points of view in dentistry regarding this matter right now but for us the primary goal cannot be highly opaque teeth that might be currently en vogue among Hollywood stars. In the US, for example, we found that dentists were using the white opaque shade of our flowable composite Grandio Flow for anterior restorations as this is usually the shade that most strongly bleached teeth have over there.

For the third year in a row, the DTSC hosts its annual CE Symposia at the GNYDM, offering four days of focused lectures in various areas of dentistry. Find us on the Exhibition Floor in Aisle 6000, Room #3.

Each day will feature a variety of presentations on topics, which will be led by experts in that field. Participants will earn ADA CERP CE credits for each lecture they attend. DTSC is the official online education partner of GNYDM.
