IPS e.max
Bleach Shades for all-ceramic perfection

The IPS e.max system from Ivoclar Vivadent enables the laboratory provision of beautiful all-ceramic restorations in an extensive range of indications, including crowns, bridges and veneers. This unique & simple system allows the restoration to be made using CAD/CAM technology or press technology. When the restoration is then finished with the new universal Nano-Fluorapatite Glass Ceramic, e.max ceram. Alternatively, IPS e.max CAD enables Dentists to provide precision fitting IPS e.max restorations chairside using the CEREC system. Whichever option is chosen, they offer enhanced aesthetics and biocompatibility compared with metal-ceramic restorations, and many believe it is the best restorative solution for strength, aesthetics and minimally invasive preparation.

The IPS e.max system offers a choice of either lithium disilicate glass ceramic and fluorapatite glass ceramic blocks for press forming or zirconium oxide and lithium disilicate glass ceramic blocks for pressing with the new universal Nano-Fluorapatite Glass Ceramic, e.max ceram. Alternatively, IPS e.max CAD enables Dentists to provide precision fitting IPS e.max restorations chairside using the CEREC system. Whichever option is chosen, they offer enhanced aesthetics and biocompatibility compared with metal-ceramic restorations, and many believe it is the best restorative solution for strength, aesthetics and minimally invasive preparation.

Learn More from Sirona!

With the huge success of CEREC CAD/CAM, Sirona Dental Systems place a greater emphasis on training. With over 22,000 systems worldwide, Sirona has been able to produce an even higher level of training, which is unparalleled by any other manufacturer. Sirona now has a blueprint of over 20 years in training CEREC users of all levels - whether you are an experienced CEREC user or someone who has just taken delivery of their CEREC for the first time. Our training is designed to ensure new users gain confidence quickly whilst those more experienced users look to carry out more complicated cases.

To provide a variety of choices for individual patients, GC Tooth Mousse is available in 5 fantastic flavours - namely, Strawberry, Melon, Vanilla, Mint and Tutti Frutti!

Banish Tooth Whitening Sensitivity

Sensitivity is often an issue associated with Tooth Whitening, which applies to both home and power (surgery) whitening procedures.

GC has introduced Tooth Mousse that is the perfect addition to your usual tooth whitening treatments. Apply immediately after tooth whitening to relieve sensitivity caused by dehydration in the surgery or provide your patients with a tube to take home with their home whitening kit.

GC Tooth Mousse is water based, sugar free topical cream that contains Recaldent® CPP-ACP (Carien Phosphoprotein – Amorphous Calcium Phosphate). This topical paste will provide extra protection for the patients’ teeth. It has been shown to display the twice daily use of 1% CPP-ACP solution produced a 30% reduction in enamel demineralisation (Reynolds, 1988).

When CPP-ACP is applied to the tooth surfaces, it binds to biofilms, plaque, bacteria, hydroxyapatite and surrounding soft tissue localising bio-available calcium and phosphate. Saliva also enhances the effectiveness of CPP-ACP and the flavour of the tooth mousse helps to stimulate saliva flow. The longer CPP-ACP is maintained in the mouth, the more effective the result.

There is a wide range of benefits for GC Tooth Mousse. It can be used to protect for teeth and to help neutralise an acidic oral environment. Additional professional applications of the mousse will be immediately following bleaching, after ultrasonic, hand scaling or root planing, after removal of orthodontic brackets, following professional tooth cleaning, after appointment of subgingival plaque and also to provide a topical coating for patients suffering from erosion, caries and conditions arising from xerostomia.

To provide a variety of choices for individual patients, GC Tooth Mousse is available in 5 fantastic flavours – namely, Strawberry, Melon, Vanilla, Mint and Tutti Frutti!

Dentoid Tooth whitening Systems

Dentoid stocks a range of rea- sonably priced tooth whitening products for in surgery or at home use.

Dentoid Tooth whitening Systems

Utilising carbamide peroxide oxygen releasing agents the Vi- vaStyle range has a gentle, but effective action on tooth structure. It is available in various concentrations of two basic presentations – VivaStyle and VivaStyle Paint On Plus - each designed with a different application in mind.

VivaStyle is a gel applied (according to a Dentist’s instructions) by the patient at home, for an hour or longer per day, using individually customised trays. It is available with either 10% or 16% carbamide peroxide content.

VivaStyle Paint On Plus is recommended for patients if they don’t want or can’t afford fitted trays. Applied by brush, the varnish remains on the teeth for 10 minutes before being removed with a toothbrush. This procedure is normally performed twice daily for 7 days. It can be used to whiten the complete den-
