**BODURAL®**

**The safe and simple alternative**

Dental professionals can now enjoy a completely new and effective solution to the management of gingivitis and the prevention of periodontal disease, focussed on a key approach of using Polyherb as a gum inflammation condition.

Decapinol® Mouthwash is an innovative antiseptic-free formula that maintains a healthy balanced oral micro-flora, whilst inhibiting the build-up of the plaque forming bacteria associated with periodontal disease. This maintenance provides a prophylactic protection against pathogenic invaders. To combat the build-up of plaque, Decapinol® Mouthwash creates an invisible barrier between dental plaque bacteria and the surface of the tooth and gingiva, making it a clinically effective solution. Decapinol® Mouthwash is a safe and gentle choice to other mouthwashes claiming to have anti-microbial properties, and unlike the unpleasant taste and aftertaste associated with these products. It is easy to incorporate into a patient’s oral hygiene routine, as there is not interaction with Sodium Lauryl Sulphate a common component of toothpaste.

Gingival health is a key indicator of overall health, and the need for effective plaque control is essential for the management of chronic periodontal disease. The role of periodontal disease is now widely acknowledged, since inflammation is a key factor in the onset of a variety of chronic conditions such as cardiovascular disease and diabetes.

Grossing the above arguments, it is clear that there is a need for new and improved solutions to help manage periodontal disease. The concept of Polyherb was created to meet this need, and its unique characteristics make it ideally suited to the prevention of gingivitis and periodontal disease.
