Having too many patients on your books can be just as detrimental to your dental practice as having too few, says Simon Hocken

Clients often ask me about key numbers they should monitor in their practices every month in order to effectively manage and monitor the success of their practice. One such critical number, and one which is rarely mentioned, is the size of their patient list (and that of their associates).

I believe that large patient lists are counter-productive and restrict practice profits, and might lead to one or all of the following situations:

• Patients are unable to make an appointment for treatment
• New patients have to wait weeks to get a new patient consultation
• The practice profits fall consistently year on year
• The dentist gets bored of having to carry out relentless check-ups
• A decision is made that means some of the patients should only receive a check-up every 12 months or, worse still, every 18 months.

Strangely, the full-appointment book scenarios above are likely to make the dentists feel more secure, which is ironic, as they should really be sounding the alarms! All of these situations will reduce the effectiveness of the practice and potentially reduce the profits.

How it goes wrong
I was working with a client recently who is a very capable and ambitious restorative dentist. We were looking at the average daily production (gross) that he earns for every day that he works. Despite having a (private) practice focused on restorative work, he was shown to be grossing around £1,000/day. This is not enough gross to be grossing around £1,000/day. He looks after 1,250 adult patients who he sees twice a year (private) practice focused on restorative work, he was shown a ‘right’ profit for him so, together, we were looking at the average annual taxable income of £70, 200. However, if this dentist is an associate on a 50 per cent contract, then when they are performing ‘check-ups’ the associate and the owner will receive £450 each: A good day’s pay for the associate, but a day with no profit for the principal.

Therefore, the practice profits fall consistently year on year. This dentist works a four-day week. He likes to take around eight weeks’ holiday every year, and he needs at least a couple of weeks to fulfill his desire to learn new clinical and business skills. So, this leaves him 42 weeks to actually practice dentistry and run his business, (this is made up of 168 days doing clinical dentistry and 42 days running his practice).

In his remaining 57 clinical days per year, he has to do all the restorative dentistry and push his gross high enough every day to compensate for 111 days grossing too little! Unsurprisingly, he is finding this a thankless and exhausting task.

Consider the situation
Before we look at the solutions, let’s model this situation some more as it’s very common and I’d like you to consider your own situation.

If you work a little more often than my client, say, four days a week, taking six weeks holiday a year and a week to do your CPD (and a week to have Fls), you will be working 44 weeks/year, that is 176 days/year clinical. If your ‘check-ups’ take 15 minutes and you see patients twice a year then:

1. If you look after 1,000 adult patients, you will spend 67 days (leaving 100 days to do clinical dentistry/year or nine days/month)
2. If you look after 1,500 adult patients, you will spend 94 days (leaving 66 days/year clinical)
3. If you look after 2,000 adult patients, you will spend 131 days (leaving 69 days/year clinical or nine days/month)
4. If you look after 2,500 adult patients, you will spend 167 days (leaving 53 days/year clinical or five days/month)

If you are doing 10-minute check-ups, then you can rework the figures. But how do you find enough time to sell any significant treatment plans in a 10-minute check up?

Let’s look in more detail at the dentist, who is, for example, looking after 1,000 adult patients. If his fee for a ‘check-up’ is £30, he will spend 80 days a year earning £900/day. In our client’s practices, we find that the average surgery has a taxed cost (outside of London) of around £450 a day. This therefore creates £450 a day profit, the equivalent of an annual taxable income of £70, 200. However, if this dentist is an associate on a 50 per cent contract, the profits he makes will drop to £450 a day profit, or £225 a day profit, the equivalent of an annual taxable income of £45, 000. This is a very low profit, which is ironic, as they should really be sounding the alarms!

‘Creating the right patient list size per dentist in your practice and monitoring this on a monthly basis, is essential to creating an effective practice that makes a satisfying profit’

To maximize your profits, you need to consider the following:

1. Maximize your patient list at 1,000 adult patients
2. Monitor this monthly, patients will be leaving the list all the time and list size will demonstrate how many new patients they need in order to replace the leavers
3. Zone their diaries so that they do a maximum of 1.5 hours ‘check-ups’ per day
4. Zone their diaries so that every clinical day has a ‘New Patient Consultation’ included
5. Consider instigating ‘check-ups’ lead by their hygienists for their patients who are dentally fit and stable

6. Decide that once their list grows in excess of 1,000 patients either:
A. Employ an associate to see the new patients
Or, my preferred option,
B. Allocate a substantial number of their list of patients to an associate for them to maintain and for the principal to see the new patients!

Creating the right patient list size per dentist in your practice and monitoring this on a monthly basis, is essential to creating an effective practice that makes a satisfying profit. Remember: too many patients per dentist can actually become just as big a problem as too few.

About the author
Dr Simon Hocken, founding partner of Breathe Business, has a wealth of experience as a successful private dentist and business coach, helping clients recognize developing trends, increase turnover and find the perfect balance between their personal and professional lives. Breathe Business is a unique leading coaching and consultancy company which specializes in working with dental principals and their teams in order to develop and grow their practices.
