Aquasil Ultra does it again!

DENTSPLY’s Aquasil Ultra has been rated 5-stars for 2007 by REALITY once again. This is the fifth time in a row that Aquasil Ultra has been rated the #1 Impression material by REALITY!

In addition to the unmatched wettability and high tear strength of Aquasil Ultra, the availability of the Aquasil Ultra digitTM unit dose cartridges were some of the features liked by clinical evaluators. Aquasil Ultra delivers recordings of the thinnest margins and still remains intact when the impression is removed from the patient’s mouth. Moreover, the mint flavour makes the process of impression-taking a pleasure for both clinicians and patients.

With such expert endorsement, why wouldn’t you use Aquasil Ultra? It has been proven time and time again that Aquasil Ultra deserves a place in your surgery as one of your regular products!

For further information on the Aquasil Ultra range, please call Lindsey Bellamy on 0800 072 3515.

A Choice Of Impressions

UnoDent offers practices a choice of impression material. UnoDent Impreg, for example, is available in a number of different consistencies and setting times. The material has low shrinkage properties and high thixotropy. Impreg is available in either addition cured (ac) kits or cartridges.

Hydrogum® 5 - 5 day stability alginate

Hydrogum® is an alginate with a 5 day stability perfect for surgeries that post their impressions or don not have a Friday afternoon collection. Immediate Hydrogum® has a fruity berry flavour which helps relax patients and minimises discomfort with an extra rapid set in the mouth of only 45 seconds. Incredibly, Hydrogum® costs no more than other branded alginates.

Samples are available or try an intro kit of 2 bags, container and measures for only £15.50 – call Zhermack on 07870 690811 or email uk@zhermack.com.

Dentist Sky Will Impress You!

Choosing a new impression material is often risky, but you can be assured that RK5 Turboflex from Dental Sky is the perfect A-silicone that provides exceptional detail reproduc- tion. This complete range allows you to use your existing technique, be it the wash tech- nique or double mixing.

The light-bodied material is easily dispensable and does not slump even when placed in the upper arches. Having extremely high levels of hydro- compatibility Turboflex impres- sions will always provide precise impressions even when in contact with gingival fluid and blood.

Should you prefer a C-silicone material, look no further than Turbosil. This dimension- ally stable impression material provides superb contrast mak- ing your impressions easier to read. Turbosil is extremely eco- nomic without any compromise on the quality.

So, whether you choose your existing brand of impression material or would like to try Dental Sky’s cost effective Turboflex or Turbosil, call Dental Sky on 0800 284 4700.

New Virtual CADbite Registration

Fast, strong and scannable Ivoclar Vivadent’s Virtual CADbite is an innovative bite registra- tion material optimised to meet the needs of today’s dental professionals.

It is an addition cured sili- cone developed specifically to record the occlusal bite for indirect restorations. It exhibits ex- cellent detail reproduction and superior dimensional stability. Non-slumping, its inherent thixotropy ensures precise recording of occlusal situa- tion even if edentulous gaps are present.

With an intraoral setting time of just 45 seconds the risk of distortion or inaccuracy due to the patient’s jaw movements is substantially reduced. How- ever, it still provides sufficient working time for full-arch bite records to be taken.

Finally, in response to the needs of CAD/CAM users, Vir- tual CADbite has a reflective surface, which delivers excel- lent results when capturing images with intraoral scan- ning devices. This allows den- tists to incorporate antagonist data directly in the restoration design.

For further information con- tact your local Ivoclar Vi- vadent Representative, visit www.ivoclarvivadent.com or telephone 0116 284 7880.

The SIROEndo Pocket has been designed with optimum user-friendliness in mind. For example, it features an ad- justable, easy-view display. The entire unit can be inclined by means of a lift mounted on the base. The LEDs on the con- trol panel are clearly visible to the dentist. The motor drive fits snugly into the sidemounted holder, which is removable for easy cleaning and disinfection. A beneficial side-effect: the holder mount functions as a convenient carrying handle.

The SIROEndo Pocket does not only indicate the approach of the apex visibly but also acoustically: The stylized rep- resentation of the root canal on the display and accompanying signals indicate that the file tip is approaching the apex. The volume of the apex signals is adjustable, as is the signal for counterclockwise rotation. The user can choose from var- ious display languages and set the display contrast in line with his or her individual prefer- ences. When using the Sirona ENDO 6:1 handpiece the den- tast can locate the apex without a file clamp. This along with the compact dimensions of the handpiece’s head ensures an optimum view on the access cavity.
