Editorial comment

Roll out the evidence

The York Review on the subject. Said Dr Cockcroft: ‘The York Review looked at 700 papers and there was not one link between fluoridation and general health issues – there really is no evidence that any damage is done and that is a fact.’ And on fluorosis he is equally as vehement.

Leader of Hampshire County Council, Ken Thornber has admitted that he has doubts on whether drinking fluoridated water is safe. He also raises the subject of fluorosis. Why, he asked, should children with otherwise healthy teeth be at risk of developing some fluorosis for the sake of just a few others who may benefit? He does have a point. For while there is plenty of evidence that fluoridation keeps decay, fillings and extractions at bay, nobody seems that keen to roll out much evidence on the safety and efficacy of fluoridation. This was the very question Dental Tribune put forward to Dr Barry Cockcroft only recently, and he remains passionately confident on the issue. Indeed, the other day he even pulled out information related to a recent study by The York Review on the subject. Said Dr Cockcroft: ‘When it comes to pushing through fluoridation, the UK remains at war. But it isn’t just the stark division that is so surprising here - more the raw and rage-fuelled emotion that comes with it. If fluoridation is as safe as Dr Cockcroft suggests, why are anti-fluoridation groups arguing otherwise? Surely there is only one solution to this non-stop conundrum – and that is we have to have more concrete evidence. In the meantime, what’s wrong with rolling out a massive campaign on the benefits of brushing children’s teeth with fluoride? You only have to look at the Government’s efforts on smoking cessation to see the impact it could make. Images of rotten teeth, extractions and children under general anaesthetic – though shocking – would get the results the profession is looking for. It would probably cost a lot less too.

Impossible NHS access

He said: ‘I spent 20 years working as a dentist in a fluoridated area and I never had to do a cosmetic procedure related to it - you would have to drink loads and loads of water to get it anyway.’ With first-hand experience Dr Cockcroft also has a point. So when it comes to pushing through fluoridation, the

Comprehensive invisible orthodontics made easy

The Clearstep System is a fully comprehensive, invisible orthodontic system, able to treat patients as young as 7. Based around 5 key elements, enabling expansion, space closure, bodily movement, derotation, extrusion, alignment and more, The Clearstep System is designed to treat any malocclusion efficiently and invisibly, no matter how severe. GDP friendly, with our specialist faculty providing full diagnostic input and treatment planning, no orthodontic experience is necessary. As your complete orthodontic toolbox, Clearstep empowers the General Practitioner to step into the world of orthodontics and benefit not only their patients, but their practice too.

Accreditation Seminar

This accreditation seminar is aimed at General Practitioners, providing you with all the knowledge and skills required to begin using The Clearstep System right away.

London Seminars

25th November 2008
2nd December 2008  - Speciall Only
23rd January 2009
17th April 2009

Personal Accreditation

Receive a visit from a Clearstep Account Manager, providing a personal accreditation in your own practice.

Further Courses

Once accredited, why not spread your wings and expand your skills further by attending one of our hands-on courses.
