I’m watching you

Patients are very astute when it comes to determining how much you care about them and their treatment, says Mike Wanless, who says there are ways of learning how to show them your sympathy effectively

The learning objectives for the day have been selected to address existing concepts of bone grafting and accelerated implants. Participants will learn to evaluate, diagnose and recognise possible indications for accelerated implant treatment. Techniques for the safe harvesting of mandibular bone block will be discussed, providing an understanding of new biologic methods of grafting for improved healing and regeneration of the grafted area. Delegates will learn to analyse the application of autogenous block grafts for lateral and vertical bone augmentation and to optimise the technique of block grafting (high graft vitality). The final learning objective is to gain knowledge of soft tissue management for graft protection and soft tissue augmentation.

Current Concepts in Bone Grafting and Accelerated Implant Treatment

Advanced Surgical Procedures with Autogenous Bone

The Royal College of Physicians, London, Saturday, 14 March 2009
