As Dr Hassan El-Nashar is the principal dentist at Nimroz, he is well placed to discuss the advantages of particular implant systems, and he is keen to offer his expert opinion on the happy combination of Nobel Biocare and the NobelActive TF3 range. The NobelActive® TF3 range is designed for implantology with just one handpiece. Coolant is dispensed at 500ml/min and the handpiece is balanced to allow comfortable working on the osseous crest and lingual access. The Sirona handpieces are compatible with all Nobel Biocare systems and offer a choice of 5 control modes: | Off | Coolant | Drying | Coolant & Drying | Air Only | Air with Spray|

The Sirona handpieces have a 40° peripheral water spray, which is ideal for implantology and ensures that the osseous crest is properly cooled during surgery. This helps to prevent heat put a dentist to achieve your true potential. This means offering the extended policy will give customers a number of choices when selecting their dental insurance policy. The following options are available:

- Comprehensive coverage: This includes all dental care services, including routine cleanings, fillings, crowns, and extractions.
- Basic coverage: This covers preventive care services, such as cleanings and X-rays.
- Limited coverage: This covers only certain services, such as fillings or crowns, and excludes routine cleanings and X-rays.
- No-coverage plans: These plans do not cover any dental services.

These plans can be customized to fit your individual needs and budget. It is important to carefully compare the benefits and costs of each plan to find the one that best suits your situation.

It is essential that children be given the tools to maintain good oral health, including learning how to brush and floss properly. Dr Hassan El-Nashar believes that this starts with education and regular dental check-ups. By teaching children about oral hygiene practices and the importance of maintaining good oral health, we can help ensure a lifetime of healthy smiles.

Finally, it is important to encourage children to be active and participate in physical activities, as this can help promote healthy habits and prevent dental problems. By making dental care a part of daily routine and encouraging healthy habits, we can help children achieve their true potential in oral health.
UCL Eastman Training in Restorative Dental Practice:

="made me a far better dentist"

"Dr Yasser Haddadi is a General Dental Practitioner at Holmenkyk in Denmark. He has successfully completed the Certificate and Diploma level courses in the Restorative Dental Practice programmes at the UCL Eastman Dental Institute. I started with the Certificate course and it gave so much professionally, that I decided to continue, " says Dr Haddadi. "One of the things that I really enjoyed was the fact that you could bring in your own cases and discuss them with really skilled and experienced dentists and get a qualified answer. The Eastman has a really good reputation. It's very competitive in Denmark, and this has made it easier for me to get onto a part-time PhD programme here in Denmark, once I finish my MSC project, helping me to develop an academic career.

"I would definitely recommend the course because it's really opened up not only new career pathways for me but also made me a much more contented dentist and a far better dentist than I was."

Encouraging oral health from the start with Spry

Several studies have now proven spry to be a highly effective tool against tooth decay in children.

Spry is a unique, natural toothpaste that contains a mild, but effective fluoride which is extremely low in alcohol. This fluoride is so mild and gentle that it does not irritate the mouth, making it safe, and easy to use from the very earliest stages.

Made up of a unique 5-carbon sugar alcohol syrce, Spry inhibits the metabolism of a number of the oral bacteria involved in tooth decay, including Streptococcus mutans (S. mutans), which have been shown to cause caries (tooth decay) and decay the surface of the tooth. With 40% less calories than normal sugar, spry also encourages a healthy diet for children that is low in sugars and bad carbs.

Spry, include those designed specifically for children. The Spy Toothbrush for example, is fluoride-free and totally safe to swallow, while being available in different flavours. The Spy Banana Brush Kit also includes a novelty toothbrush to encourage children to take their daily toothpaste.

It is essential that children be given the tools to maintain good oral health, from a young age. Combine effective products with good dental routines established from a young age, and children will have every chance to enjoy a healthy and comfortable life.

SDI Poladent and Polanight

Poladent and Polanight from SDI are two cosmetic whitening systems that will help your patients achieve a whiter and healthier smile. Both Poladent and Polanight - are pH neutral which ensures the full release of the peroxide. It is patient-friendly - no patient discomfort - Have a high water content which reduces dehydration - Contain desensitising agents - Have a long lasting fresher taste - Incorporate special additives that maximise peroxide release. This makes both systems mild enough to ensure complete comfort throughout the treatment. The mask offering the extended period will give you complete confidence in the product and offer additional peace of mind. Stephen Price, Director said, "Having taken the time to research what was available, we feel that Poladent and Polanight are the best in the business to design and fabricate our new practice. Takara Belmont are so confident in the products that they will guarantee 100% customer satisfaction, manufacturing a dental unit that can be delivered directly to the operating site with the Kirschner/Meyer principle for optimum treatment with irrigation.

Takara Belmont are so confident in their product that they guarantee 100% customer satisfaction, manufacturing a dental unit that can be delivered directly to the operating site with the Kirschner/Meyer principle for optimum treatment with irrigation.

For more information, please contact The Dental Directory on 0800 585 586, or visit www.thedentaldirectory.co.uk

An Invitation To Lunch

OralB's popular 'lunch and learn' sessions are CPD accredited so all team members can earn up to one hour of verifiable CPD in the comfort of their own practice. The meetings are ideal for those who want to learn more about the latest developments in power brushing and toothpaste including clinical support and free samples. Samples for patient and personal use will also be made available. OralB will endeavour to visit on the most convenient day for the practice and will provide a presentation focusing on clinical data behind their products. As the presentation takes place at lunchtime, OralB will provide lunch for all team members.

Access to the internet has led to an increased interest and awareness amongst consumers regarding matters of oral hygiene, and it is hoped that these informal workshops will enable them to learn about OralB's products and learn how they might help them in a relaxed environment with less distraction as possible in their normal working day. These events are popular amongst the audience and have been well received. Early to request a 'lunch and learn' demonstration you will need to contact your local OralB office and will provide all further information. If you do not have their details please call 0800 137 4921, alternatively if you are a member of the customer service team will put your contact. As demand high, reps will allocate appointments on a first come, first served basis.
