Seminars from Straight Talk

At Kent Implant Studio, the team, led by Clinical Director Dr Shukri Dattani, is committed to forging strong relationships with all those referring to the practice. Always working efficiently and professionally, Dr Dattani and his team are happy to help and support referring practitioners in any way they can. Bearing in mind the latest technologies and technology in Implant Dentistry, Kent Implant Studio is perfectly situated to offer patients in both London and across the South East top quality care. Welcoming referrals for even the most complex of cases such as sinus grafts, bone grafts, guided bone regeneration and ridge expansions, Dr Dattani and team pride themselves on being able to offer their patients a hands-on Inman Aligner course led by Dr Tif Qureshi, said: “I appreciated
to discuss cases with peers and get advice and support from the Straight Talk

All-on-4® from Nobel Biocare: For predictable and affordable treatment

Hands-on Inman Aligner Accreditation Seminar from Straight Talk

On Monday, June 20th, starting at 9.30 am, there will be an all-day hands-on course for the Inman Aligner system. The course will be held at Straight Talk, 19-23 High Street, in Richmond.

The course will cover the basic principles of the Inman Aligner system, including the use of the appliance, the selection of cases, and the step-by-step process of fitting the appliance. Participants will have the opportunity to work on live cases and will receive hands-on instruction from an experienced instructor. The course will also include a hands-on Inman Aligner course led by Dr Tif Qureshi, said: “I appreciated

In the safest possible hands.

Laser Tower Pick® is a compact lamp designed for small root restorations in London, Sweden February 28, 2011 – The Swedish dental company Directa AB introduces Laser Tower Pick®, a new professional dental instrument specially designed in cooperation with renowned Dutch Dentistry.

FenderWedge®Prep is narrow at the front with a rounded boat-shape tip that allows it to be inserted into narrow proximal spaces while compressing the gingiva without harming it. Insertion may be buccal or lingual. The plan for the practitioner is that the new FenderWedge®Prep is ideal for all large preparations since crowns, veneers and bridges.

UK’s first elevation Pico Laser

The UK’s first elevation Pico Laser has been installed at the Katzer Dental Lounge in Bath, Gloucester.

The elevation Pico Laser contains two lasers: a 5 Watt Gallium Aluminium Arsenate (GaAlAs) diode laser and a small laser pointer. The GaAlAs laser is ideal for both periodontal and endodontic work where it can sterilise the root canal. The laser energy is fibre delivered - the smallest available fibre being 200 microns.

The GaAlAs laser has a wavelength that makes it an ideal way to do dental surgery using this laser, as it can be used with less heat generation. Not only does the laser cut but it also sterilises the tissues as well making good post-operative results. Dr Jaderlan, who is no stranger to lasers said of the study: "The Elexxion Pico Laser is a revolutionary new way of placing restorations. Individually Taught Oral Prevention (iTOP) method, and developed courses intended to help practitioners understand how to gain compliance, teach their patients about oral healthcare and encourage patients to attend dental clinics regularly."

With Pico lasers and hypnotists can build on their existing knowledge by addressing some of the top advanced and top modules, where they can eventually become lecturers themselves. Because of the emphasis that Pico lasers put on the patient education, your patient education is more important than ever and iTOP can help you improve your patient communication skills and help them take charge of their own oral health.

As well as the three-level courses, you can attend the iTOP implant course, which focuses on helping patients to look after teeth during implant treatment. You are your patient’s greatest asset in their quest for good oral health, so maximise your own potential and theirs, with iTOP courses, brought to you by Curaprox. For more information please email clare@curaprox.co.uk or call 01483 410 002 or visit www.curaprox.co.uk.

Optimise your patient education technique with iTOP Courses

When Dr Jiri Sedelmayer of Hamburg University’s School of Medicine used the problems facing GDPs who have patient education, he designed a method of teaching to help dentists increase their knowledge and their skills; to educate them about how education is the only idea that the individually Taught Oral Prevention (iTOP) method, and developed courses intended to help practitioners understand how to gain compliance, teach their patients about oral healthcare and encourage patients to attend dental clinics regularly.

With Pico lasers and hypnotists can build on their existing knowledge by addressing some of the top advanced and top modules, where they can eventually become lecturers themselves. Because of the emphasis that Pico lasers put on the patient education, your patient education is more important than ever and iTOP can help you improve your patient communication skills and help them take charge of their own oral health.

As well as the three-level courses, you can attend the iTOP implant course, which focuses on helping patients to look after teeth during implant treatment. Corofly

Amongst the UK population the number one reason for choosing a mouthwash is for fresh breath. Corofly Daily Defence Mouthwash is a daily use mouthwash containing 250 ppm fluoride, to help protect against tooth decay and cavities. It also brings the benefits of DECAPINOL® and helps to maintain healthy gums and teeth. Corofly Daily Defence Mouthwash is in addition to toothbrushing to result in a suit up to 3.5 times greater plaque reduction than brushing alone.

Richard Medley-Dixon, Export Marketing Manager, GoldSmithLindly Consumer Healthcare comments: “We know that patients are concerned about their breath and this is the main reason for choosing a mouthwash, yet only 50% of patients are using a mouthwash every day. This is because the adverse effects of mouthwash use in addition to an effective brushing technique are often put off patients.”

Now available, Corofly Daily Defence Mouthwash contains both chlorhexidine digluconate and fluoride to help patients maintain healthy gums and teeth daily.

For more information call 01483 410 002 or visit www.coroflyprofessional.co.uk.

VitalSmile

The quality of your surgery equipment speaks volumes about your business, so when Dr Theodorou of the University of Athens recently launched its new SDR (Smart Dentine Replacement) the natural dentine shape always shows through. “Generally I use SDR for Class I and II restorations for post area teeth, however it could also be used as a core build up material. I use the product as a base under a capping composite as a main build up material for the cavity. After trying SDR I have no reason to use another, as SDR satisfies the needs of both a base and layer material.”

Tandem: A Flexible Approach to Interdental Cleaning

As an addition to its popular interdental brush range, Tandem has recently launched its new FlexiMax brush - the ultimate choice for patients with limited mobility.

The FlexiMax is ergonomically designed with an ultra soft grip handle for ease of use, even for patients with manual dexterity or fine motor hand coordination deficiencies. It is easy to fill into the daily oral interdental health care routine of your patients. The FlexiMax brings patients the same superb design and high quality as other Tandem products, with a little extra for those who need it. The FlexiMax is now available in our interdental cleaning kit.
