Under Armour Performance Mouthwear

There are many types of sports mouthguard that offer oral protection during contact sports, but only Under Armour Performance Mouthwear™ can deliver a comfortable fit and feel, while also providing a key advantage: a unique biomechanical design that can help reduce the risk of dental injury by more than 70%.

The key feature of Under Armour Performance Mouthwear™ is a patented technology called ArmourBite. This biocompatible material is custom-molded to fit each athlete’s mouth and is designed to work alongside the natural jaw muscles to provide a natural feel and function.

In addition, Under Armour Performance Mouthwear™ incorporates a built-in bite plane, which can help reduce the force of impact on the teeth, while the ArmourEdge technology provides an extra layer of protection for the lips and gums.

For more information on Under Armour Performance Mouthwear™, call Nuine on 01453 872266 or email amoursupport@nurm.com

Dental Directory at the 2011 Clinical Innovations Conference

The Dental Directory team demonstrated the service that has saved them more than a 50 per cent share of the current dental supplies market at the Clinical Innovations Conference 2011. Delegates were encouraged to speak to The Dental Directory’s representatives about all of their supply needs, and saw the service operate in simulated practices and programmes, which are designed to save practices both time and money.

The largest group of skilled dental professionals in the UK, The Dental Directory has access to all the latest products and innovations, and can offer competitive pricing and a quality service.

The Dental Directory manages a network of over 27,000 dental professionals across the country, and with a 96 per cent recall record for orders, offers an easy way to use ordering and re-ordering. A new service being offered is the benefits for practices of regular dental checks for patients.

With high standards of customer care matched by low prices, The Dental Directory desires their reputation for excellence, and until 2011 to 2012 get a glimpse of the expert’s in action.

For more information simply contact your local Dental Directory Representative, call 0800 585 588 or alternatively visit www.dental-director.co.uk.

Ray Goodman speaks at NRA conference

Ray Goodman, Senior Partner at Goodman Lega, Lawyers for Dentists at press conference earlier this year at the National Association of Specialist Dental Accountants (NASDA). Topics discussed included lending and the increasing expense share agreements, NHS contracts and preparing for retirement. The conference’s advice helps dental professionals to plan for retirement so they can enjoy the benefits of their work.

For more information please contact Ray Goodman, Goodman Lega, Lawyers for Dentists on 0151 707 0000, email ray@goodmanlega.co.uk or visit www.goodmanlega.co.uk

Smile-on and The Dental Directory Award £1000

Bursary to Dentists

Smile-on and The Dental Directory have announced four lucky dentists a £1000 bursary to be spent on their favourite Dental Directory products while they study for an MSc in Restorative and Aesthetic Dentistry. Not only will the successful candidate receive an MSc degree on completion of the course, they will also make valuable savings on the equipment they will need throughout the programme.

The innovative post-graduate qualification is The UK’s first online programme for dentists on the subject. Modules include:

- Patient selection and treatment planning
- Current techniques, materials and clinical advances in posterior aesthetics
- Crown and bridge technology
- Restoration of endodontically treated teeth
- Restoration of edentulous treated teeth

The course allows busy dentists to study at times and locations convenient to them, enabling them to continue treating patients throughout. The majority of the theory can be accessed online, but also includes three residential ‘hands-on’ courses.

For more information about The MSc in Restorative and Aesthetic Dentistry, call 0207 7409 8999 or visit www.smile-on.co.uk

Complete practice transformation with minimal disruption

The furnishings of a workspace within a practice must be fit for purpose and safe for use. In your workspace design, a task on the wall, or a hand, or has it merely adapted over time as result of circumstances? As a professional business owner, you need to have people practice principles that can spare very little time considering refurbishment. That is also why it is necessary to have an efficient workplace that can be run on the job in hand. However, an inefficient workplace can have a direct impact on the efficiency of staff, and subsequently the wellbeing of the patient.

Since 1975, Tavom has been providing bespoke dental cabinetry solutions for the UK and Ireland. Complete dedication to excellence means that expert consultants and highly skilled technicians can design and install final installations, ensuring receipt of the very best innovative solutions to individual requirements. It is also important to consider a refurbishment is the disruption of treatment, Tavom prides itself on transformations with minimal disruption. Superior members of staff offer compassionate and non-disruptive, durable work surfaces of Corian or glass offer practicality. Tavom perfectly balances style, ergonomics and value, providing cost-effective bespoke cabinetry solutions. Whether you wish to update current facilities or undertake a full refurbishment, call Tavom today.

For additional information or advice call Tavom UK on 0870 705 2121

BACD London Study Club

On Thursday 4th August the BACD London Study Club will be hosting a talk by Dr Quenby. Dr Quenby, President Elect of the BACD, on The Importance of Pre-operative Oral Health: Bonding an Anterior To Prevent Dental Disease.

Dr Quenby will be explaining how the use of the Dahl principle day to day in restorative dentistry and how it can be used in the practice setting for treatment combined with traditional occlusal theory. The lecture will consider how the Dahl principle can be used to prevent the need for more aggressive tooth preparation in your patients and how intervention at an earlier stage can be relied on to produce reliable results for the patient. The Dahl principle is an evidential based method used among dental professionals, Nobel Biocare™ NobelReplace™ implants are a great place to start. Nobel Replace™ is easy to use to thanks to its precision-milled threaded design system and step-by-step drilling protocol for maximum predictability, that making it an excellent choice for dentists of different level of experience.

Dr Quenby will discuss the importance and flexibility, NobelReplace™ implants can be used in multiple situations to suit every patient’s needs. The spares implant treatment to a variety of patients and helps to increase the productivity of the patient base. With Nobel Replace™ patient treatment time is minimised, and surgery is faster and more efficient thanks to Nobel’s unique healing process and reduces patient discomfort. Nobel Replace™ is now designed for single-tooth restorations,fixed partial dentures as well as full arch fixed and removablesuch as implant bridges. Furthermore, Nobel Replace™ can be used for immediate extraction sites.

For more information and technical information contact Nobel Biocare on 0208 716 3500 or visit www.nobelbiocare.com
