Fast & safe restorative dentistry with children in mind.

Restoration of primary teeth - a hassle? Not anymore thanks to FenderPrime.

FenderPrime is a unique combination of a preparation shield and matrix for Class II fillings of primary teeth where quick and simple solutions are highly valued. The whole procedure is done with in few simple steps:

1. Insert FenderPrime linguually or buccally.

2. Prepare the cavity whilst protecting adjacent tooth and gingiva.

3. Bend the matrix to the contour of the tooth and restore.

FenderPrime is available in two sizes, long and short.

FenderPrime Green (the long wedge) can be shaped to the contour of the tooth.

FenderPrime yellow has a shorter, more rigid plate for very tight interproximal spaces and back to back restorations.

FenderPrime - couldn't be easier!

Fast & safe restorative dentistry

The rot runs deep
Stephen Hudson discusses modern dentistry

In my mind, there is a problem that the profession is not addressing, which can easily be displayed by the public, and that is despite the fact that you are purely reading. I want you to scan through it and look at all the adverts for postgraduate courses:

What do you see?

You see lots of courses on how to do smile makeovers, ortho, veneers, implants and aesthetics.

What don't you see?

You see nothing on peri, rapport building, diagnostics, LA techniques, minimal intervention dentistry, caries removal or hands on RCT.

Not the fault of the Dental Tribune, because they have no control over the advertising sent to them. And whilst on a local level there is a fair bit of these latter courses offered though the deaneries, whenever I go on these courses, it's always the same faces I keep seeing. And many of the courses are mediocre at best, with some notable exceptions of course.

And then I hear that at least one dental school has dropped the "treatment of a patient under exam conditions" from the finals exam. That makes no sense to me whatsoever. I just can't comprehend the thinking behind that and am amazed that (assuming they have been told of this event) the GDC inspections have allowed it. I'm also hearing reports that graduates are leaving dental school never having done a molar endo, and never having made a F/F. Now I'm sure the powers that be know what they are doing, and it all looks a little short sighted from where I'm sat.

It worries me.

Now have a chat with any dental adviser from DPL or DDU and they will tell you how claims are rising, even with the governments actions on no win no fee. And barring the fact that "stuff happens" that we can't predict, claims are rising because of two main factors:

- Dentists are doing things they shouldn't be doing on people they shouldn't be treating;
- and dentists aren't doing things on people they should be treating.

We are making a rod for our own backs, and the lawyers, often quite rightly, are getting very rich because of it. Then we hear that some figures state that almost 50 per cent of all claims are down to what one dentist says about another dentist's work (usually without being in full awareness of all the facts) and there is a huge tsunami threatening to wash over the "profession".

It's a tsunami of our own making, and down to either our own greed and egos, or the fact that many practitioners, devoid of passion and things on people they should be treating.

If that patient didn't walk into my surgery to give you a concerned look. If that patient didn't say "I just don't get it".

Maxwell Maltz became one of New York's most successful plastic surgeons from a squat practice, by sending his patients away for 30 days to do visualization exercises to change their self perception of what they deemed to be their problem. Fifty per cent of his clients reported that they no longer needed the surgery at the end of the 30 days. But the referrals from the patients who respected him so much kept him busier than ever.
And so I ask; where is the training?

There are 30,000 dentists in this country. Where is the mandatory national training pathway that we should be following? Airline Pilots can’t get off the ground without being tested every six months, and surgeons can’t operate without regular peer reviewed examination. Why does this not apply to us? Oh I know FGDP do a pathway of sorts, but it’s not cheap and has limited places.

Go into any lab in the country and ask them to show you the preps they are making crowns on. Look at the imps they are being sent. It will shock you; it certainly shocked me when I last did it. There aren’t many courses out there that get you to cut a posterior gold onlay prep in peer reviewed conditions. But there are plenty of courses to show you how to coat teeth with porcelain.

When I talk to the oral surgeons that I know, they tell me that at least 40 per cent of all the implants placed in this country are badly done. Forty per cent.

When I talk to the oral surgeons that I know, they tell me that at least 40 per cent of all the implants placed in this country are badly done. Forty per cent. If correct, that’s a staggering number and one that I am sure the indemnity providers are seriously worrying about. Whilst I know we have to start somewhere, we shouldn’t be doing treatments we are not competent to do. We shouldn’t be doing treatments that aren’t in the best interest of the patients, and we shouldn’t be doing such advanced treatments (some would argue any treatments) on patients we don’t have rapport with.

That’s not what dentistry is about.

We need courses that are comprehensive, that cover the basics and which cover the more advanced stuff. Failing to spot and treat perio problems is one of the biggest case loads facing dental indemnifiers at the moment. Where are the nationally run hands on courses to correct this? Why are dentist allowed to place implants after a weekend course at Gatwick? Why do the GDC’s core subjects not cover anything to do with clinical dentistry? That’s obscene. Ok, you can handle a complaint, but how’s about having rapport skills so that the complaint never arose, and the clinical skills that meant your six veneers didn’t keep dropping off in the first place.

What I do know is that we, as a profession, will not correct this ourselves. We will spiral down into a hole of our own making until someone turns around and MAKES us change. And then we will likely end up like the USA where everything gets farmed out to specialists, increasing the costs, and increasing the inconvenience to the patient.

And you know what; I have no idea how to correct this. That’s my confession. It will take a smarter person than me to build a barrier against the incoming tsunami.

That’s the way it looks from here.

About the author
Dr Stephen Hudson BDS, MFGDP, MSc is a dental practice owner working in Chesterfield. When he qualified in HHS, he soon realised that the way most dentists trammeled their dentistry was slowly killing them, and decided he needed to try and do something to reverse this trend. This is why he set up the website www.gdpresources.co.uk.
