Introducing a unique, patented dental implant design called PowerPen™ for use with Astra Tech's anatomically designed implant for sloped ridges
Astra Tech launches an anatomically designed implant for sloped ridges called PowerPen™. This uniquely shaped implant eliminates the need for bone grafting and optimizes implant position to maintain marginal bone support and aesthetics. The sloped design helps to eliminate crestal bone loss rather than letting the anatomy adapt to the implant design; this works particularly well for patients with limited bone stock or when bone grafting is not an option. Septoject Evolution is engineered for a smoother penetration with less discomfort. A specially-designed log book is also available now from your dental dealer. If you require further information, please contact: Chris Orpin, Product Manager, Astra Tech Ltd. Telephone: 0495 410 6566 or visit www.astratech.co.uk.
