Digital Dental

Free six-month 3D CBCT trial

Free digital dental care - all procedures carried out by independent digital imaging company, offer the complete range of diagnostic and treatment options from scans to image, the world’s no.1 Digital Dental Radiography & CT manufacturer. This includes the Sirona Digital X-ray System.

Now they are offering a free six-month 3D CBCT trial for clients purchasing their next 3D scanner. The 3D Flex presents superior digital panoramic imaging and its wide angle reduces the time to scan to the Flex 2D.

The Flex2D offers a choice of two optimum fields of view - 5cm x 5cm for single site implants, complete endos, surgical applications and 8cm x 5cm for guided implant surgery and larger procedures. The new EZ3D software facilitates powerful easy true planning and diagnostics, and is compatible with various surgical guidance software including Simplant and Procera.

Experience the stunning image quality of the Flex 2D and the major benefits of 3D digital and film based x-ray apparatus – including the very latest Galileos range of digital x-ray units.

Due to the sloped neck of this dental implant, Astra Tech recommends that drilling protocol for consistent results every time.

Nobel Biocare, a worldwide manufacturer of restorative and aesthetic technology, was proud to establish their Clinical Innovation Conference in London this May at the Royal College of Physicians. The Nobel Biocare Europe’s representatives and discover more about the company’s range of innovative products and educational programmes to support them, including a CAD software suite for deep cavity treatment.

Nobel Biocare® - the state of the art rendering of chairside time per minute when they use their bulk fill material.

Intraoral modified Fox glue is now free. Heraeus has a ‘Buy three get one introductory offer’ on Venus® Bulk Fill flowable composite, which is confirmed by the findings of an independent study conducted by the Reality Research Lab in USA. Compared to incremental bonding in steps, the Reality report stated that 'placing a thicker layer is a more efficient way to provide retentive seal on what most of us want.'

This product is great news for Dentists looking for a strong, easy-to-use and light-curable in 20 - 40 seconds.

Chairside time savings with new®Venus® Bulk Fill flowable composite

Chromato® Chairside flowable restorations using Venus® Bulk Fill flowable composite have been confirmed by the findings of an independent study conducted by the Reality Research Lab in USA. Compared to incremental bonding in steps, the Reality report stated that ‘placing a thicker layer is a more efficient way to provide retentive seal on what most of us want.’

Through this development not only because the new range of bulk fill composites, don’t put significant shrinkage stresses on the developing bond’ they should be able to be placed in relatively thick layers (about 4mm) . Reality’s findings reinforce the results of an Integrated Media survey last year in USA which reported that more than four out of five dentists surveyed were planning to try out the technology.
