**Cerec meets Galileo Sirona Dental Systems**

Sirona Dental Systems are proud to announce the arrival of their latest news in Cerec Galileo CBCT software.

This exciting development in CEREC technology allows the integration between Sirona’s CEREC CAD/CAM system and Sirona’s Galileo CBCT scanner. Key x-ray, surgical and prosthetic planning can now be performed in the fastest 3D format.

Now they are offering a free six-month 3D CBCT trial for clients imaging the files for the first time. This innovative technology is bringing you the future of digital imaging.

For further information call Digital Dental on 0208 027 8931, email jac@digitaldental.co.uk or visit www.digitaldental.co.uk

**Greater Control, Lens Distortion with New NobelGuide™ Evolution needles**

Sident remains a global leader in dental pharmaceuticals with the NobelGuide™ Evolution needles. Providing a quality product with less displacement, meaning less discomfort for your patients, even when used for multiple injections. Designed with a patented scalped bevel for ease of insertion and reduced pain. "There are some who are not only not less uncomfortable, but are suffering from hypersensitivity will soon also appreciate its advantages in reducing the risk of plaque accumulation in deep cavities. By improving gum health and helping to reduce the risk of recurrence, Pre-Exposure treatment will also help guard against the causes of sensitivity for future pain of mind.

For further information please call michelle@ab-communications.com, 07804 178719

---

**Sensitivity Relief**

Oral/Pro-Pro-Exposure toothpaste, for people who experience this painful condition it will probably be enough by itself. Experiencing by a wide cross-section of the population, not only when eating or drinking cold food and drinks or taking a glass of cold as a sensitivity, is caused by nerves which are stimulated in the dentine layer of teeth exposed for tooth wear or periodontal disease. Stabilized Stannous fluoride, researched in both laboratory and clinical studies acts by partially or completely stabilizing the enamel’s hydroxyapatite crystals.
