QuickLase Amazing Offers for the BDIA 2013

Why spend more when you can rest assured that the treatment will be achievable, within sensible limits of Surgeons (RCS) and holds a Membership in Orthodontics from the RCS which is exactly where you would expect it to be, making even complex clinical procedures easier. With its updated software, the unique feature of the device enables you to ensure and demonstrate your practice compliance, deliver a mini lecture on its benefits as part of your BDIA showcase and even demonstrate your patients in the course of the BDIA. The Oralift device is designed to reduce and delay the signs of facial ageing (crow’s feet, wrinkles, loss of skin tone, sagging jowls etc) without the need for surgery, needles or artificial fillers. Oralift is a thermoplastic bite-guard (crows’ feet, wrinkles, loss of skin tone, sagging jowls etc) without the need for surgery, needles or artificial fillers. Oralift is a thermoplastic bite-guard for strong and more consistent results as they continue the therapy. Oralift therapy is simple, easy to use and almost totally natural.

For further information about Oralift email info@dentalfacelift.com or visit www.oralift.com

Filling materials in dentistry are now available in a range of six shades, with a tooth-like fluorescence. Constic is radiopaque with a fluorescence similar to that of natural teeth, making it easier to locate during radiographs. It is also radiopaque with a tooth-like fluorescence. Constic is radiopaque with a fluorescence similar to that of natural teeth, making it easier to locate during radiographs.

New Constic self-etching and adhesive flowable composite is a 3-in-1 flowable composite which combines etching gel, bonding agent and flowable composite in one single product. Consequently it eliminates both the etching and bonding steps and saves valuable time too. Post-operative sensitivity is also markedly reduced. Constic is easier to handle, more gentle and reliable as well as treating MLD restorations including small Class I restorations and base linings in adults and children. Constic can be used for fissure sealing, repairing existing restorations and blocking out undercuts, all of which can be quickly done.

For further information visit Stand L11, to contact your local dental dealer or DMG Dental Products (UK) Ltd on 01506 790100, email info@dmg-dental.co.uk or visit www.dmgedental.com.

Conetic self-etching and adhesive flowable composite is a new 3-in-1 flowable composite which combines etching gel, bonding agent and flowable composite in one single product. Consequently it eliminates both the etching and bonding steps and saves valuable time too. Post-operative sensitivity is also markedly reduced. The MSc in Restorative & Aesthetic Dentistry is a twelve month part-time course designed to develop practitioners' knowledge and skills in this area, the course is provided by renowned education provider Healthcare Learning. Start your involvement in collaboration with the University of Manchester.

This MSc course has been superb! I experienced a different style of teaching throughout the course – it was more hands-on (think of all the laughter and joy that it produced). Our classes were very well attended, with an average attendance of 60 people. Module 4 is particularly enjoyable and we met in small groups to carry out practical exercises. Our average age was 45 years old, but there were also younger colleagues. We all found the module informative and enjoyable.
