Highly Economical: Each 500gm tub of Alkazyme-W allows for up to 100 soakings. Economical: Just five grams of Alkazyme® with ordinary tap water makes one litre of effective enzymatic cleaning/disinfecting solution. Choice of user format: Available from all dental sundry suppliers in both 50gm loose powder tub and tubs of 100 easy dose water soluble sachets.

For further information please visit www.alkazyme.com

Cleaning, disinfection of all reusable, immersible instruments in conjunction with a standard ultrasonic cleaner a maximum five minute immersion time is all that is required to render soiled instruments thoroughly clean and shining bright.

Continual disinfection: Alkazyme® continually disinfects the contaminated ‘wash water’ as created within the ultrasonic cleaner.

Simple to use: A 15 minute weekly routine service is all that is required to ensure the dental unit water supply remains free of bacterial contamination thus ensuring a fresh and healthy water supply.

Immersion time is all that is required to render soiled instruments thoroughly clean and shining bright.

Jack. In environments where bunting is impractical, this enables theoperator to celebrate the Jubilee whilst carrying out their day to day duties. This comfortable polyester top sits perfectly on the shoulders of your team and, of course, on your own team. You will also be able to demonstrate your understanding of the benefits of good record keeping and the potential pitfalls and dangers of keeping poor records.

The Key Skills 3 programme is a valuable and useful learning experience in which you can make use of the key principles developed in key stages one and two.

The Key Skills 3 qualification will enable you to improve your understanding of the responsibilities of your role and the importance of good record keeping and the potential pitfalls and dangers of keeping poor records.

RPA Dental: providing exceptional service across the UK

UK - an on-going expanding global economy, the purchasing options available to dentists are far greater than ever. As well as an increasingly broad range of products to choose from, the global economy also means many UK dental suppliers are able to keep a stock of goods from many international ranges. This can have a significant impact on a dental practitioners’ operations, and can reduce the operational down time associated with having a limited range of products to choose from. RPA Dental is also pleased to be confirmed as a Regional Sales and Service Centre for iVoKo Dental Equipment. Over the last 18 years RPA Dental Technicians and Sales Team have undergone extensive training and induction into the iVoKo product lines. RPA Dental’s long history of working with European Integrated Dental Packages simplifies its inclusion within yet another fantastic corporate brand and market leader.

PHILIPS

Homing in on an award with Sensodyne® Repair & Protect

A standard bathroom tap digresses US $15.6 billion, according to the European Dental Industry (BDHF) claim that the average time spent brushing for overall good oral hygiene is 41 seconds per day. Using these figures, the average person who keeps the same habits for their whole lifetime, will use 75g of toothpaste. This means that an individual could save 2.25 kg of waste, and contributes to the cost of treatments.

Philips Airfloss reduces waste and cleans the hard to reach areas, with Sensodyne® Repair & Protect at www.voroscopes.co.uk

for more information, call RPA Dental on 08000 933975, or visit www.rpadental.net.

Conservation tips - Philips issues water-saving advice

With a working pressure of 6 to 8 bar, the continuously-rated DK50 & DK50-2V compressors feature Siemens electric motors, a range of tank solutions to cover every aspect of running your practice.

Prudence pays dividends with Sensodyne® Repair & Protect

The value of dental professionals in the products’ dual-layered, water-free technology which provides guaranteed gelling ability and a stable long shelf life without the need for refrigeration.

exposed dentine,1-3 withstanding daily oral challenges faced by patients 1,3 to twice-daily brushing. The layer forms within dentine tubules and over tooth surfaces.1,3,4 It is a tissue specific response acting as a repair mechanism which enables the containment of oral fluids and helps protect the exposed dentinal tubules against the oral environment.
