Infection control

Decontamination and debris removal for your dental instruments

Dento-Viractis 55 is a versatile combined biocidal product with a broad spectrum of activity including the complete destruction of all microbial species, spores, endospores, and viruses.

The film company wanted to use equipment that had a sufficiently modern debris removal and is also bactericidal, fungicidal and virucidal.

Viractis 55 dissolves quickly and easily saving time and effort.

From Dental Sky in either a 2kg or 5kg bucket or 50 unidoses of 15g each. Dento-Viractis 55 dissolves quickly and easily saving time and effort.

Why purchase the ThermoKlenz? It is an accredited thermo-washer disinfector of residual matter left on the instruments due to the regulation of water temperature and detergent concentration. It also allows validation of a 15 minute weekly routine service clean is all that is required to ensure a continuous ‘bacteria free’ environment.

Mieg MELAthme™ – disinfection made easy

The Mieg MELAthme, available from Henry Schein Minerva, sets a completely new benchmark in the world of water supply.

It is a space-saving and compact all-in-one washer that can fit almost anywhere in your practice. Some of the standard features include a quick and easy to replace filter, integrated water line solution, and an easy-to-use and highly flexible control interface.

W&H 24seven provides round the clock support allowing the dental team to have peace of mind and confidence.

Handpiece care and maintenance products

W&H have a range of handpiece care and maintenance decontamination products. Features include the Lisa, Lisa Max Steeline, along with the Thermoflame™ and the W&H 24seven support system.

W&H 24seven support website

W&H are delighted to offer support allowing the dental team a new service, free of charge, which assists them in adhering to current decontamination guidelines. This new model provides immediate online access to expert support, training, and comprehensive documentation for the W&H decontamination product range.

Hygiene matters

There are many cross infection hazards within a dental surgery which necessitate the need for stringent legislation. Anything that reduces the risk is therefore well received. The wastebasket philosophy on the Cioe II treatment centre from Takara Belmont is one such example. The waste bin is placed well away from the patient to ensure there are no re-entrants for bacteria to escape the controlled environment of the Cioe II.

W&H works consistently to develop new and improve existing products and services allowing them to continually increase the support that they offer the Dental Team. W&H are always improving their products and services allowing them that ensuring that they work to best practices.
