And so it is that Nobel Biocare is...
Independent digital imaging and advice comes as product specialist is appointed for Digital Dental believes that high quality digital imaging is a cornerstone for successful Private Practice including enhancing facial Aesthetics in all its myopic form. Proud of their reputation, Digital Dental provides unbiased advice to equip the clients with the right products for their individual dental requirements. Digital Dental hopes that their expertise in this field will lead to a better quality of life for patients.

With over 12 years’ experience, they understand that every Practice is different and has individual requirements. Therefore they offer a range of options, enabling their clients to choose the best products to suit their needs. They believe they supply the best products on the market, produced by the highest-quality manufacturers, they provide superior and reliable products.

Their technically trained advisors demonstrate, install and train their clients on the selected equipment; ensuring they get exactly what they were promised. They can demonstrate everything at one visit and at a time to suit the Practice, including live demonstrations not mock ups on dummy systems. They then install the equipment and provide comprehensive free hardware and software training. For further information telephone Digital Dental on 0800 027 8393, email sales@digitaldental.co.uk or visit www.digitaldental.co.uk.

**New Digital Doc x-ray unit from Digital Dental**

The Digital Doc X-ray is simple to use because it is an all in one integrated within the handpiece. It features a new X-ray touch-screen foot Switch, enabling practitioners to choose from macro to full field x-rays and a unique USB 2.0 connection that fits virtually all standard delivery unit couplings and both NobelGuide™ and the A-engraving systems. The new streamlined profile has a smaller, narrower soft-tip head which facilitates easier access to the retromolar region. It also features brilliant 6-point LED lighting and Sony’s Hi-Resolution CCD for greater illumination and enhanced optical clarity. Another key feature is its dual capture buttons for easy left and right hand user flexibility - big advantage for non-dominant hand users. The Digital Doc x-ray delivers the cleanest, most detailed images currently available. The Digital Doc x-ray is compatible with any digital imaging software and USB equipped PC or laptop.

**Looking at Cone Beam Technology**

Digital Dental have the reputation to suit every requirement and budget. The Digital Dental offers a complete range of cone beam devices suitable for any practice.

The entry-level 3D i-CAT is a combined panoramic, cephalometric and CBCT system which can be upgraded with a one shot cephalostat for orthodontists. The i-CAT is the ideal device for the multi-disciplinary practice which carries out implant dentistry and orthodontics. The i-CAT offers a wider selection of fields of view, with four options between 2D panoramic and full volume CBCT imaging.

Top-of-the-range, the i-CAT 3D is the first system to offer Free Fovea ranging from 5cm to 15cm to 15cm. This further expands the range of diagnostic capabilities and includes various default views for greater operator convenience. All of the systems automatically switch between the panoramic and CBCT sensor and can upgrade with a cephalostat, enabling you to scan every type of image without the need to purchase more devices. The 3D images are viewed with the powerful S2D2D software. They deliver all the anatomical information for single up to full arch implant placement, and are ideal for precise endodontic, orthodontic and peridontal diagnoses.

For further information call Digital Dental on 0800 027 8393, email sales@digitaldental.co.uk or visit www.digitaldental.co.uk.

**Oralign Ltd utilises a unique method of interdental stripping along with a small diameter flexible shaft that enables practitioners to prepare teeth quickly and reliably for the best possible results.**

*Oralign* super-soft fibre tip.

**Oralign** uses the 3D printed model in the laboratory to send you the final wax up. The Laboratories use to prompt users to replace the brush head to continue to brush optimally. Further research conducted by Philips showed that 30 per cent of the population could benefit from more effective interdental cleaning and the company launched Sonicare AirFloss, a first-of-its-kind innovation which introduces ‘invisigrip’ technology to remove plaque on hard to reach teeth and improve the best possible results.

*Oralign* is the ideal answer for those patients who find manual dexterity problems, find string floss difficult to use and consequently, have unsatisfactory oral hygiene. *Oralign* was brought to my attention by Dr James Russell of Straight Talk Seminars. I was more than impressed with the results and was particularly with the clinical value of not having to prepare teeth to achieve a beautiful smile.*The online video training demonstrates our commitment to the success of the system, from the science behind the aim, to causes, troubleshooting and everything in between.

*The course is also backed up by the online forum.*
