The Evidence says it all

Effective daily oral care at home can help maintain a healthy mouth and reduce the onset of oral diseases.

Most dental professionals agree that not only is it important to have an optimum daily oral care regime, but that it should be tailored and adapted to the patient’s own oral care routine at home. Dental health is the result of both dental care provided at the surgery and of effective self-care measures taken by the patient. The need for effective self-care measures is highlighted by the fact that 90% of people present with dental caries, with plaque and biofilm being the prime cause of the problem.

Colgate Total® toothpaste has been shown to be effective in reducing plaque and caries, and is recommended by the Trade Association Dentists (TAD) for use at home to help maintain a healthy mouth. The TAD guidelines recommend the use of fluoride toothpaste and a manual toothbrush to help keep your teeth healthy.

For more information about how a Takara Belmont treatment centre might be the right choice for your practice call 020 7515 6533.

Great value - Diamond Capsules

Now is the time to try Diamond GC Capsules. Buy three packs of 20 Diamond GC Capsules before the end of September and get three packs of 40 at no extra cost.

Diamond GC Capsules are used by clinicians worldwide to improve the quality and strength of the evidence. The strength of evidence is assessed by including a control group with the study group. The control group is treated in the same way as the study group but with an intervention that is not expected to have any effect. This is known as a placebo. Control groups are essential in order to determine the quality and strength of the evidence. The strength of evidence is assessed by including a control group with the study group. The Voyager II was selected to provide ambidextrous functionality and the Cleo II came top of their list with its small footprint allowing space to be maximised in the open clinic. The knee-break and chair design were also chosen in collaboration with the child and their family, a large and critical part of the Department’s work. The Voyager II was also selected to provide ambidextrous functionality for the Department’s left-handed surgeons.

Peter Underwood from The Dental Director who managed the installation believes the products meet a number of criteria: “Clearly the most important consideration was offering exactly what the Trust was looking for at the right time at the right price. In addition, the fact that the equipment was well designed and had a high level of comfort for both those using it and the patient was a huge plus.”
