The image shows a screen on which a dental treatment is being displayed. The screen is mounted on a mobile cart, allowing for easy movement. The screen displays various dental images and animations, including close-up views of teeth and dental instruments in action. The images are bright and colorful, providing a glimpse into the world of modern dental treatment.

For more information on dental treatment, contact your preferred dental practice or visit their website. Dental care is essential for maintaining good oral hygiene and overall health. Regular check-ups and cleanings can help prevent dental issues and keep teeth and gums healthy. It is important to consult with a dentist to determine the best course of action for your specific needs.
Education the focus at 19th Annual Scientific Meeting the EAO

Antony A. Ndofor at the European Association for Osseointegration’s (EAos) 19th Annual Scientific Meeting were spotlight for choice with a variety of master classes, presentations and hands-on by-step courses to choose from.

Sponsored by Nobel Biocare, leading producer of innovative restorative and aesthetic solutions, the event offered delegates a series of inspirational lectures and small group discussions on topics such as:

- Options for implant restorations
- Cone beam CT imaging in implant dentistry
- Psychological and psychiatric factors influencing implant treatment
- Complex peri-implantitis
- Staged lateral augmentation for implant surgery

Speakers at the meeting shed light on some of the most pressing issues which dentists face on a regular basis.

Decapol® toothpaste: The innovative approach to treating and preventing gum disease

Dental professionals can now provide their patients with a clinically demonstrated solution to the prevention of periodontal disease and the reduction of gingivitis by up to 47% compared to a control mouthwash.

Containing 0.2 per cent Dejmekol Hydrochloride, Decapol® toothpaste helps to:

- Prevent plaque adherence to teeth and gums
- Decapolex existing bacteria, enabling easy removal when brushing
- Promote a healthy balance of cool flora

The combination of brushing and anti-plaque action of Decapolex® helps to ensure that plaque is removed effectively, and this build up of new plaque is significantly reduced. Decapolex® toothpaste is the ideal choice to Decapolex® mouthwash, working in a gentle and safe way to create an invisible barrier that prevents plaque forming, and protecting the tooth surface.

Because Decapolex® is free from bicarb, patients can enjoy an equally gentle and safe treatment to the tooth surface.

Decapolex toothpaste is a way of supporting patients in both the short and long term preventative management of gum disease.

Close-up Dr Bharat Soneji of the Bloomsbury Dental Practice in London, explains why he chose to become an Inman provider via this route: “I am a partner in private practice with a busy home life and I am undertaking

training. In addition, I wanted to keep the ideal of minimal intervention. After getting a few orthodontic

appliance fitting and adjustment.

So far, my experience has been good. The patients seem to be happy with the aesthetic outcomes.

Dr Soneji’s clinic also has a range of laser systems. The team also raised awareness of their recently launched

exclusive Mike mug.

Delegates at the forum joined the fun at schilke’s stand to celebrate the success of the company’s popular line of touch free decontamination systems. The launch of the company’s newly recently launched companion website www.comparemerchandisecom where their market

explained to delegates whether or not their practises surface cleaner and disinfectant was suitable for their needs. Attendees also enjoyed plenty of Mike to shot down gaffs in schilke’s specially made computer game, with

the team going to show the team going to show even more as an incentive.

The launch of the exclusive Mike mug.
