BDA calls on new government to fix dentistry system

By DTI

London: The British Dental Association (BDA) has said that it will work with the new Conservative cabinet and members of parliament towards a better contract for dentistry in the UK. Remarkably on last month’s general election results, Chief Executive Peter Ward pledged his organisation will continue to fight for better recognition of dentists and distribution of funding for the profession under the new government.

"Healthcare was a central battle-ground between all of the parties in this election and I am sure you will all be interested in what share of the £8 billion, promised by the Conservatives to the NHS, will be spent on provision of dentistry," Ward said during a special session at the British Dental Conference and Exhibition in Manchester.

Ward criticised that while all parties acknowledged the importance of dental care for the overall health system, little was actually mentioned in the party manifestos except for those of the Green Party and Plaid Cymru.

"Doctors, nurses and midwives do wonderful work, but so too do dentists across the UK. With a political agenda that seeks to tackle the challenges of diet, alcohol, sugar and tobacco, it is clear that dentists have a role to play in a government strategy of prevention and integration in healthcare,” he emphasised. Ward said that the BDA will be reaching out to the government’s new health cabinet, as well as re-elected and new MPs, as soon as possible to follow up on critical issues, such as regulation.

"The small majority means that every MP will have a stronger position to influence Parliament, so engaging with them will be all the more useful," Ward said.

London: According to the QS World University Rankings by Subject 2015, Swedish dental schools are among the best in the world. With the Karolinska Institute leading the list of top dental schools and the University of Gothenburg following closely in third place, the country currently claims two of the world’s best three dentistry faculties.

In second position, the University of Hong Kong is located in the midst of the Swedish leaders. The list of top ten dental schools further includes the University of Michigan in the US at number four, KU Leuven in Belgium in fifth place and the Tokyo Medical and Dental University in Japan ranked sixth.

King’s College London in the UK at number seven is the only dental school from Britain to have made it in the top ten list this year.

The Q5 World University Rankings are produced annually by Quacquarelli Symonds (QS), a British company specialised in education and study abroad. Its rankings comprise an overall university ranking and a variety of subject rankings. Dentistry is one of the six new additions to the individual subject rankings, bringing the total number of academic disciplines the report covers as of 2015 to 36.

The rankings are based on major global surveys of academics and graduate employers, as well as research citations data from the literature database Scopus. For the QS World University Rankings by Subject 2015, 8,042 academics and 41,910 graduate employers from 60 countries and 894 universities were asked to list up to ten domestic and international institutions they consider excellent in categories such as academic reputation, citations per faculty and employer reputation.

The full QS World University Rankings 2015, as well as the rankings by subject, can be accessed at www.topuniversities.com.
Military dentist follows Cockcroft as Chief Dental Officer

New initiative aims to improve oral health of care home residents

Military dentist follows Cockcroft as Chief Dental Officer

By DTI
LONDON: After two months of searching, the National Health Service (NHS) has recently appointed Sara Hurley from the Royal Centre for Defence Medicine in Birmingham as new Chief Dental Officer (CDO) for England. She is the second woman to occupy the government advisory post after Dame Margaret Seward became CDO in 2000.

Hurley follows Dr Barry Cockcroft, who retired in February after holding the position for almost a decade. She received her bachelor’s degree from the University of Bristol, and holds an MS in Dental Public Health from University College London, as well as a King’s College London MA in Defence Studies.

Appointed as a Queen’s Honorary Dental Surgeon last year, she has also served as Chief Dental Officer for the Royal Army, among other posts. In her recent position at Queen Elizabeth Hospital Birmingham, she has worked with the NHS to assure access to and quality of health care for injured military personnel. In her new role, Hurley will work in partnership with other directors, domain leads and other clinical leaders in regional and local area teams to improve outcomes for patients, and champion the role of dentists and dentistry within the health system, the NHS said in a note.

Hurley commented that as CDO she will be working collaboratively across the breadth of the dental health care profession to develop ideas that will contribute to achieving quality health outcomes and better oral health for all.

Several dental associations in the UK have responded positively to the appointment. “This is the time for new beginnings, fresh eyes and renewed relationships, and we intend to approach her appointment in that spirit,” Chair of the British Dental Association’s Principal Executive Committee Mick Armstrong said. “Building an effective working relationship is in the best interests of our patients and our profession, and genuine engagement will be reciprocated.”

“In a country where marked inequalities in children’s oral health persist, we look forward to working with her on the long overdue care pathway for children’s dentistry. Our next generation grows ready and waiting to progress this vital piece of work,” British Society of Paediatric Dentistry spokesperson Claire Stevens commented. “We are looking forward to a long and productive working relationship with Sara.”

BDIA extends contracts with London and Birmingham venues

By DTI
LONDON & BIRMINGHAM: The British Dental Industry Association (BDIA) has announced that it signed new contracts with both the NEC in Birmingham and the ExCeL London Exhibition and Convention Centre in April to hold its Dental Showcase for another three years in each venue. Alternating between the two cities, the annual dental show attracts up to 50,000 visitors every year.

According to the BDIA, the contracts secure its partnership with ExCeL London for the upcoming shows in 2016, 2018 and 2020. The NEC, which will host this year’s edition in autumn, has agreed to host the event in 2017 and 2019.

With an overall space of 186,600 m², the NEC is Britain’s largest exhibition centre. It also hosts the Dentistry Show organised by ClosedStill Media in Coventry every year in spring. The BDIA’s partnership with ExCeL London began in 2002. Last year’s show there saw an overall attendance by 350 exhibitors and 9,000 professional visitors, according to the association.

“It is not easy to find suitable venues for a show of this size to secure contracts with both ExCeL and the NEC that will give us stability for the next six years is significant achievement for us,” Executive Director of the BDIA Tony Reed said.

An ExCeL London representative commented that his company is committed to helping the event grow with further investment in the venue’s infrastructure in the year’s to come.

The next edition of the Dental Showcase is scheduled for 22–24 October at the NEC.

New initiative aims to improve oral health of care home residents

By DTI
LONDON: Several studies have found that the oral health of care home residents is often poor and that in many cases carers have not received specific training to help residents with their daily oral hygiene routine. This problem is now being tackled in a new British Dental Association (BDA) initiative in physical and cognitive older. With increasing age, many people have to face a deterioration in physical and cognitive abilities and often need care.

The Improving Oral Health of Older Persons Initiative aims to improve oral health and quality of life for older people living in residential care homes in Kent, Surrey and Sussex through education and training of care home staff. “By helping to raise awareness of the importance of good oral health, both for quality of life and for general health, and by introducing oral health training for carers within residential care homes, we aim to establish a sustainable quality standard for the oral healthcare of older persons,” the initiative stated.

In order to implement its measures, the initiative builds on research into the experiences of older patients and their carers by Dr Paul Newton, a research fellow at the Centre for Positive Ageing. Newton is an expert in patient empowerment and the management of chronic conditions. His work for the initiative has led to new training methods and information for carers of people living with dementia.

“Research about identifying and managing dental pain and oral health problems for people living with dementia was lacking—both in the literature and in previous initiatives,” Newton said. “We have worked closely with the Older Person’s Initiative to make sure the oral health needs of this vulnerable group are addressed.”

Problems with teeth, gums and dentures can significantly affect the overall well-being of an older person and his or her quality of life. There is a range of oral health challenges for elderly people, including loosening teeth, dry mouth and difficulty with eating and using a toothbrush. These problems can lead to poor nutrition, low self-esteem, social isolation and the exacerbation of other conditions, such as diabetes and cardiovascular disease.

Health Education Kent, Surrey and Sussex is a local education and training board, authorised as a sub-committee of Health Education England. It was established in April 2013, when it took on the functions of the old Kent, Surrey and Sussex Dental Education Authority and aims to ensure that health care providers across the region have suitable staff with the necessary skills.

The Centre for Positive Ageing, based in the Faculty of Health Education and Health, brings together 22 research clusters from across the university. It aims to understand and develop solutions to the problems facing individuals, like chronic pain and dementia, as well as developing new models of care, such as meeting the care needs of a growing older population.
Periodontitis linked to heart attacks in kidney disease patients

By DTI

BIRMINGHAM: Over 10 per cent of the adult population suffers from chronic kidney disease (CKD) and those affected often have poor health outcomes owing to an increased incidence of cardiovascular disease compared with the general population. A team of researchers at a university recently found that treating a common gingival condition that causes gingival inflammation, loss of the bone that supports the teeth and ultimately tooth loss.

Previous studies have found that more than 8 per cent of people with CKD have inflammatory gingival problems, caused by inadequate removal of dental plaque from between the tooth and gingival margin and made worse by impaired immunity and wound healing. Experts have identified that bacteria in the mouth can enter the bloodstream through periodontal conditions, causing blood cells to malfunction and leading to clots and narrowing of the arteries.

The latest research at the university suggests that increased mortality in people with CKD may be linked with chronic inflammatory conditions such as periodontitis, which causes gingival inflammation, loss of the bone that supports the teeth and ultimately tooth loss.

CKD progressively worsens kidney function, raises blood pressure, and can cause progressive vascular injury and heart disease. CKD progressively worsens kidney function, raises blood pressure, and can cause progressive vascular injury and heart disease.
“Holding ConsEuro in London was a little bit of a risk”

An interview with Prof. Stephen Dunne, King’s College London Dental Institute

As one of many dental organisations to do so, the European Federation of Conservative Dentistry (EFCD) chose to hold its international congress in the UK this year. Dental Tribune UK sat down with EFCD President and King’s College London professor Stephen Dunne in London to discuss the event and how technology is increasingly shaping the field of dentistry.

Dental Tribune UK: Prof. Dunne, the ConsEuro conference in London was a little bit of a risk because with all the other conferences to be going on this year in the capital and other parts of Britain there could be an overload. We actually spent months discussing a window in which we would attract the highest number of delegates. With 500 and growing so far, the congress has clearly exceeded our expectations and, while previous congresses in Italy or Turkey might have had a bigger turnout, the conference here has attracted delegates from 29 countries, including from Australia, the US and the Middle East. It is probably one of the most multinational conferences we have ever had.

You were originally planning for 350-450 participants. Can the outcome mainly be attributed to the London factor?

We chose one of the best conference centres in the world with the Queen Elizabeth II Centre right in the heart of London, it is fair to say that we also chose one of the most expensive ones. This made us very concerned when we planning this three years ago because at that time we were in an economic downturn. Trying to secure sponsorship from companies was difficult back then. They were all downsizing and did not have any money to spare for conferences.

Owing to the economic situation gradually improving over time, we exceeded our expectations with regard to sponsorships. We actually sold out the exhibition space several months ago. That has been very successful and helped us to cover the costs. We came above break-even on the first day, so I am much more relaxed today than I was yesterday morning. And it looks as though we might make a reasonable profit, which would then be shared between the EFCD and King’s College London.

King’s recently made it on to the list of the top ten best dental schools globally. How much do you think the school’s reputation contributed to the congress outcome?

There are a number of dental schools surveys and rankings worldwide. Despite different methodologies and different variables, King’s usually comes out very near the top, which I am very pleased about. The school attracts not only good teachers and researchers, but also equally good clinicians from across the world.

When I first joined the EFCD about ten years ago, there was very much an effort to compete with the International Association for Dental Research, so it was very focused on academics and researchers from the universities. My view is that this was a mistake, as we really need to provide a conference that has interest across the board, so it must have academic content of excellence to attract researchers and teachers, as well as clinical content suitable for clinicians to provide evidence-based knowledge for the work that they do. Therefore, for every session that we have this year here at ConsEuro 2015, we have an evidence-based start, followed by clinical applications and hands-on sessions after lunch-time that help practitioners get to grips with equipment they heard about and want to have a chance to play with. That is very attractive to clinicians and you can see a great deal of interest there.

The programme for ConsEuro 2015 is very focused on technology issues. Would you confirm this to be the overall theme of this conference?

From the beginning, we planned this to be a very high-tech conference. In society and certainly in dentistry, medicine or surgery, technology is becoming increasingly important. And while air turbines and scalpels are still staples of the trade, there is a huge amount of technological equipment coming onto the market for operative work, dental surgery, logistics and communication.

Our belief is that dentists need to know about all of these things, as well as to have an understanding of the evidence base. Should they be using these things and, if they are using them, which particular model? This was very much the rationale when we were planning the programme. We also ought to have a paperless conference. Our website and app have been very effective and when I read statements yesterday on our Twitter feed, participants commented that this was the most technologically advanced conference they have ever been to.

Almost every dental practice across the world now employs some form of technology...

“From the beginning, we planned this to be a very high-tech conference.”

Technology has clearly expanded the scope of this conference. Does this also apply to clinical practice?

Almost every dental practice across the world now employs some form of technology, be it electronic patient records, stock-taking or equipment, such as lasers, CAD/CAM and digital imaging to show patients areas of the tooth they could not possibly see otherwise. Digital imaging and photography are also very important from a medical and legal point of view, as this area is increasingly becoming a concern.

Where do you see the trends with regard to dental materials?

The materials that we use now were not available to me when I was in training and in my early practice and the stages or requirements for their use are infinitely more sophisticated. Nowadays, you might have ten stages to a bonding procedure and every one of those stages is critical. If you fail in only one of them, your restoration fails before it has even started.

Historically, dentists have been trained by representatives of the companies who make the materi...
