BACD Gives its Members
 something to Smiles About

BACD’s Annual Conference is taking place in London on 10th-12th November, 2011. The theme of the conference is “Adapting to change: maximum gains from minimum effort – minimum intervention at the highest level of care.”

The seminar will cover “Overview of Endodontics: Diagnosis: When to perform root canal and non-surgical preservation therapy” and “Why care for the future behind the choices? Preparation - What techniques/systems are available and what are the indications and contraindications?” and “Why care for the future?”

Panellists: Annette Vowles, John Menzies, Anthony Rigg

The seminars offer dynamic debate in an informal and sociable setting among peers and participants will be encouraged to engage in brainstorming, discussion and reflection.

For dates and full information please contact Fiona at BACD on 020 7224 0991 or visit www.endo-london.co.uk

EndoCare hosts endodontists in practice

Dentists will learn to move away from the traditional methods and think about the possibilities that technology can offer.

EndoCare is the UK’s leading provider of endodontic training.

For full details of the programme, and to register online, visit www.bacd.com. Alternatively, postal registration forms can be downloaded from the website www.dentsply.co.uk/Academy.aspx, or taken from the conference brochure, and should be sent to Mrs Sue Harvey, British Academy of Cosmetic Dentistry, 29 Harley Street, London W1G 9QR.

Sirona presents 3D X-ray innovations

In assessing, patient counselling and precise treatment planning, an avator generated by a computer program provides the dentist and makes it easier for the patient to understand the proposed treatment.

The result is a lifelike depiction of the anatomical structures of the face and room for decision making both for the dentist and the patient.

The UCL Eastman Dental Institute
Biolithos most advanced implant system is now available to dentists throughout the UK.

The latest Laser-Lok 3mm dental implant incorporates many special features. It is the first 3mm implant with Laser-Lok technology which provides a biologic seal and maintains coronal bone on the implant collar and is designed specifically for extremely small esthetic regions. Extensive biomechanical tests show the Laser-Lok 3mm dental implant system is to be more than 20 per cent stronger than a 3mm implant on the market. This extra structural threat is effective when immediately loaded. The broad array of prosthetic options makes the Laser-Lok 3mm implant the ideal implant for 10 million high risk situations. Each treatment and implant comes with a 1mm cover screw/ healing abutment. Unlike virtually all other dental implants on the market, Laser-Lok implants have micro channels – a series of cell-sized (approximately 10 microns) 10 micron circumferential channels on the collar that are precisely created using laser ablation technology. Because this technology also microchannels the implant surface and a repeating nanotexture that maximizes surface area and enables cell proliferation and collagen microfibrils to interdigitate with the Laser-Lok surface. The Laser-Lok 3mm dental implant system is available in 10.5mm. 12mm and 15mm lengths.
