Dental Hygienists and therapists can support patients who suffer from xerostomia. The lecture has been specifically developed for the conference by dental hygiene therapists who include elements of improving outcomes using audience keypads. The presentation aims to cover both the prevalence and causes of the condition. Nurses will be able to take away information relevant to their role, including the impact of the patient and the role of the dental hygiene therapist in discussing the condition and making recommendations to improve the patients’ quality of life. Dry mouth affects around 20% of the population and is especially common in those taking 3 or more drugs. The Biotène range has been developed specifically for people with dry mouth and can be recommended for daily use. Biotène Oral Balance Saliva Replacement Gel offers patients developed specifically for people with dry mouth and can be recommended for daily use. Biotène Oral Balance Saliva Replacement Gel offers patients developed specifically for people with dry mouth and can be recommended for daily use. Biotène Oral Balance Saliva Replacement Gel offers patients developed specifically for people with dry mouth and can be recommended for daily use. Biotène Oral Balance Saliva Replacement Gel offers patients.

Diplomacy saves the ‘day with Roger-Gulfine Design’

Tactful communication and diplomacy from Roger-Gulfine Design, founder of Gulfine Design, saved the day for Apar 5yed when he was preparing to launch Pearl Dental in Istanbul.

“It wasn’t for him the whole thing would have been a complete disaster” says Alip. “He was absolutely brilliant to work with, he listened to everything I had to him and helped as far as possible with some ideas that I had that wanted to implement in the practice.”

When disagreements with building contractors threatened to derail the development of the practice, Roger Gulfine stepped in to mediate, quickly finding a resolution that all parties could accept.

“It helped me feel that I had regained complete control of the project, but without Roger’s intervention the building would probably have hal,” says Alip.

**Listerine**

Working in partnership with dental professionals to provide expert care.

Tom Johnson and Johnson is pleased to introduce the first in a new expert range focusing on the growing demand for effective plaque and calculus control. Listerine Advanced Defence Sensitive blocks 92% of dentine tubules in just 6 rinses in vitro.

It is widely accepted that sensitivity arises from exposure of dentine tubules in response to everyday stimuli such as cold drinks. Therefore, effective and robust blocking of dentine tubules offers the greatest prospect for lasting relief of dentine hypersensitivity. Listerine Advanced Defence Sensitive can be used alone for lasting protection, or in combination with the most recommended pastes from the leading sensitivity brand, to significantly increase the number of tubules blocked in vitro. With the launch of Advanced Defence Sensitive mouthwash, Johnson and Johnson is looking forward to working closely with all professionals to deliver effective treatment outcomes for patients. Recommend Advanced Defence Sensitive for expert care whenever you have it.

For further information on Listerine® Advanced Defence Sensitive, please contact Johnson & Johnson on 0800 328 0750.
